## GRADUATION PROJECT

# COMPARATIVE FINANCIAL STATEMENT ANALYSES of MARSHALL and ÇBS 

Submitted to<br>Mehmet AĞA<br>Submitted by<br>Oğuzhan GÜRKAN

#### Abstract

Financial measures are often used to rank corporate performance. Growth in sales, return to stockholders, profit margins, return on equity are measures of financial performance that can be determined by analyzing a company's financial statements. Financial statements include a wealth of important information that is useful to investors, creditors, and other external users. In this project, we take a closer look at how information in the financial statements can be combined, analyzed, and used to support many important financial decisions.

The aim of the study is to analyse the financial statements' Çbs and Marshall for last five years (1998 to 2002) and compare the current performance with past performance of Çbs and Marshall. These companies produce many kinds of painting products, such as internal and external paints, wood preserves and etc... This financial statement analyses information enable us to understand the companies position in to the painting market.

## INTRODUCTION

This project focuses on financial statement analysis, which means using financial statement data to assess a company. Sources of information about companies, the objectives of financial statement analysis, and methods for evaluating financial statements are covered. The majority of the project deals with ratios and how to understand the financial statements as prepared under GAAP. Disclosure practices have evolved with the specific purpose of providing information to investors, creditors, managers, suppliers, customers anyone who wants to know about a companies financial position or prospects. The project concentrated on how information is collected, aggregated, and disclosed. We have frequently provided ratios and other tools of analysis and have demonstrated how the information might aid in making decisions. In this project we integrate prior material and discuss additional tools for analyzing and evaluating the company's financial position. ${ }^{1}$

In today's economy, investment capital is always on the move. Through organized capital markets such as the Istanbul Stock Exchange, investors each say shift billions of investment Turkish Liras among different companies, industries, and nations. Capital flows to those areas in which investors expect to earn the greatest returns with the least risk. How do investors forecast risk and potential returns? By analyzing accounting information for a specific company in the context of its unique industry setting. The goal of accounting is to provide economic decision makers with useful information. The financial statements generated through the accounting process are designed to assist users in identifying key relationships and trends.

[^0]The financial statements of most publicly owned companies are classified and are presented in comparative form. Often, the word "consolidated" appears in the headings of the statement. Users of financial statements should have a clear understanding of these terms.

Most business organizations prepare classified financial statements, meaning that items with certain characteristics are placed together in a group, or classification. The purpose of these classifications is to develop useful subtotals that will assist users of the statements in their analyses. In comparative financial statements, the financial statements amounts for several years appear side by side in vertical columns. This assists investors in identifying and evaluating significant changes and trends. ${ }^{2}$

The internal and external painting sector has very good market in Turkey. So, there are many companies in painting market. Because, the painting is everywhere. For example; on houses' walls, on furnitures, on cars and etc... But, several companies have better position than other companies in competitive painting market.

Çbs and Marshall paint manufacturing companies are rooted and old companies in Turkey. These companies are private companies and their stocks are traded in Istanbul Stock Exchange. We think that Çbs and Marshall are leaders in painting market in Turkey. So, we chose Çbs and Marshall paint manufacturing companies. And in this study, we will analyze financial statement of Çbs and Marshall for last five years (1998 to 2002) and compare the current performance of both of them and compare with together. At the end of these processes, we can see easily that which company has got best financial position.

We have conducted the analysis of Çbs and Marshall in five stages.

[^1]The historical backgrounds of Marshall and Çbs are in first stage.

We have been given general information of financial statements in second stage. These information definitions and explanations balance sheet, income statement, statement of stockholders' equity and statement of cash flow.

Some very important tools of analyzing financial position of a company is in third stage. These tools are component percentage (vertical analysis), trend percentage (horizontal analysis), TL. and percentage changes and ratio analysis.

The fourth stage includes financial statement analysis of Marshall and Çbs. We will see their financial performance with tools of analyzing.

In the fifth stage limitation of the project will be explained.

And final stage is conclusions and recommendations.

## I. HISTORICAL BACKGROUNDS of MARSHALL and ÇBS.

### 1.1. Historical Background of Marshall.

A production plant established in Topkapı-Maltepe in the year 1954... dealing in paint production on a 2000 m 2 area with only 20 personnel and hardly supplied 20 KW mains power.

At the outset of 1967, construction of a new plant started in Gebze-Kaynarca, near the Marmara sea at 65 km east of Istanbul which was commissioned with full capacity in 1972.

Today, Marshall Boya ve Vernik Sanayii A.Ş. is one of the leading paint manufacturers of Turkey with its extended product range and increased production capacity supported by the licenses granted, know-how agreements and technological improvements.

Marshall has become a distinguished company among its rivals through the importance it places on the human and training besides the considerable investments wade on environment-friendly paint technology and the Environmental Management System applied. Being the permanent pioneer in developing new technologies, Marshall has merged with Akzo Nobel, the world's leading paint manufacturing company through the transfer of shares in July 1998. ${ }^{3}$

### 1.2. Historical Background of Çbs.

A modest hardware dealer in 1943's Fener Haliç in Istanbul is the foundation store of today's Çbs. Çbs Paint and Chemistry Industries Co. started with the establishment of a construction painting facility on a land of 1.5 acres near Alibeyköy stream in 1953-54. An extension project had been developed with the purchase of a new 2 acres land, two years

[^2]later. In 1958 turpentine which is produced by using raw resin distillation plant was established. In 1962, based on the license agreement with ICI and depending on the project provided by ICI, Belco car paint plant was established. Polyester resin production started at synthetic resin plants which was established in 1964-65. With the establishment of Printing Ink factory in 1971, the production of any kind of printing inks started under the license agreement with famous German company Hostmann Steinberg. We have lost Recep Çavuşoğlu founder and member of board of directors of Çbs group on 19.02.1979 at 21:50 eternally. Alibeyköy plant reaching certain level of technology and capacity with gradual organizations were narrow anymore for a growing Çbs. Çbs founders and directors realizing this situation believed in the necessity of a major investment and enterprise. Towards this purpose they initiated the projection of modern and integrated factory which will be established in Çayırova in 1977. Construction of first facilities started in 1978 by the end of 1979 the move from Alibeyköy to construction paint facilities was ended with the beginning of production of construction paints. In 1987,Mikrotaş Micronised Powders and Polyester recent facilities started. In 1998, Indısturial and Automative dye facilities started operating. The establishment of Çayırova facilities was completed with the establishment and movement of Çbs Pirintaş Printing İnks Co. to Çayırova in 1989. Bye the end of 1993, first long-term credit in this industry was provided with the credit agreement signed with IFC for $\$ 15.000 .000$. On the date 30.03 .1994 with the technology transferred from ICI and franchising agreement, Çbs Auto Paint Co. which produces Dye, Varnish, Resin and Polimerization products was established. On 15.04 .1994 with the partnership of Çbs Holding, Japan Shinto Co. Ltd. And Japan Itochu Corporation. Çbs Shinto Co. was established which is the first partnership with foreign companies is operating in dye and chemical products. On 28.04.1995 Çbs İmporlant Export Co. which operates in production, export, import of printing ink, microised powders and any kind of paints, was established.

On the date 15.01 .1996 , Çbs Industrial and Automotive, ship and yachting paints, varnish, resin and polymerization products was established. 01.04.1996 a technical license agreement was signed with Nippon Paint Co. Ltd./ Japan to serve automative sector on the issues of acrylic first layer and varnish system, solid last layer, priming coat. 09.07.1998, a technical license agreement was signed with Nippon Bee Chemical Co. Ltd. To serve automotive industry on issue of plastic parts painting. 28.04.1995, $30 \%$ share of Çbs whose recorded capital ceiling was 1 Trillion TL. And capital was 520Billion TL. was opened for public. $05.04 .1996,40 \%$ share of Çbs whose recorded capital ceiling was 570Billion TL. And capital was 95Billion TL. was opened for public. ${ }^{4}$

[^3]
## II. FINANCIAL STATEMENTS.

Financial statements are designed to assist users in identifying key relationship and trends. The financial statement of most publicly owned companies are "classified", and are presented in "comparative form". Often, the word "con-solidated" appears in the headings of the statements. Users of financial statements should have a clear understanding of these terms.

Most business organizations prepare classified financial statements, meaning that items with certain characteristics are placed together in a or "classification". The purpose of these classifications is to develop useful subtotals which will assist users of the statements in their analyses. These classification and subtotals are standardized throughout most American businesses, a practice which assists decision makers in comparing the financial statements of different companies. ${ }^{5}$

Investors who purchase a company's stock expect that they will receive dividends and that the stock's value will increase. Creditors make loans with the expectation of receiving interest and principal. Both groups bear the risk that they will not receive their expected returns. They use financial statement analysis to (1) predicted the amount of expected returns, and (2) assess the risks associated with those returns. ${ }^{6}$

### 2.1. Balance Sheet.

The purpose of a balance sheet is to show the financial position of a business entity at a specific date. Every business prepares a balance sheet at the end of the year, and many companies prepare one at the end of each quarter.

[^4]A balance sheet consists of a listing of the assets, the liabilities, and the owner's equity of a business. The balance sheet date is important, as the financial position of a business may change quickly. A balance sheet is most useful if it is relatively recent. ${ }^{7}$

Table 1. shows how the balance sheet is constructed.

Table 1. The balance sheet. Left side: total value of assets. Right side: total value of liabilities and shareholders' equity.

### 2.1.1. Assets.

Assets are classified as either current or fixed. A fixed asset is one that has a relatively long life. Fixed assets can either be tangible, such as a truck or a computer, or intangible, such as a trademark or patent. A current asset has a life of less than one year. This means that the asset will normally convert to cash within 12 months. For example inventory would normally be purchased and sold within a year and its thus classified as a current asset. Obviously, cash

[^5]itself is a current asset. Accounts receivable (money owed to the firm by its customers) is also a current asset.

### 2.1.2. Liabilities.

The firm's liabilities are the first thing listed on the right-hand side of the balance sheet. These are classified as either current or long-term. Current liabilities, like current assets, have a life of less than one year (measuring they must be paid within the year), and they year are listed before long-term liabilities. Accounts payable (money the firm owes to its suppliers) is one example of a current liability.

A dept that is not due in the coming year is classified as a long-term liability. A loan that the firm will pay off in five years is one such long term debt. Firms borrow over the long term from a variety of sources. We will tend to use the terms bond and bondholders generically to refer to long-term debt and long-term creditors, respectively. ${ }^{8}$

### 2.1.3. Owners' Equity.

The owners' equity in a corporation is called stockholders' equity. In the following discussion, we will use the broader term "owners' equity" because the concepts being presented are equally applicable to the ownership equity in corporations, partnerships, and sole proprietorships.

Owners' equity represents the owners' claim to the assets of the business. Because creditors' claims have legal priority over those of the owners, owners' equity is a residual amount. Owners are entitled to "what's left" after the claims of creditors have been satisfied

[^6]in full. Therefore, owners' equity is always equal to total assets minus total liabilities. ${ }^{9}$ (Table2.)

Increases in owner's equity; The owner's equity in a business comes from two sources. These are investments of cash or other assets by the owner, and earning from profitable operation of the business.

Decreases in owner's equity; Decreases in owner's equity also are caused in two ways. These are withdrawals of cash or other assets by the owner and losses from unprofitable operation of the business.

Table 2.1.

$$
\text { Total Assets = Total Liabilities }+ \text { Total Owners' Equity }
$$

### 2.2. Income Statement.

The income statement is a separate representation of the company's revenue and expense transactions for the year. It is particularly important for the company's owners, creditors, and other interested parties to understand the income statement. Ultimately the company will succeed or fail based on its ability to earn revenue in excess of its expenses are important sources of cash flows for the enterprise. Revenue are increased in the company's assets from its profit-directed activities, they result in positive cash flows. Similarly, expenses are decreases in the company's assets from its profit-directed activities, and they result in negative cash flows. Net income is the difference between the two. Should a company find

[^7]itself in the undesirable situation of having expenses greater than revenues, we call the difference a net loss.

### 2.2.1. Net Income.

As previously noted, net income is an increase in owner's equity resulting from the profitable operation of the business. Net income does not consist of any cash or any other specific assets. Rather, net income is a computation of the overall effects of many business transactions on owner's equity. (Table 3.)

### 2.2.2. Revenue.

Revenue is the price of goods sold and services rendered during a given accounting period. Earning revenue causes owner's equity to increase. When a business renders services or sells merchandise to its customers, it usually receives cash or acquires an accounting receivable from the customer. Inflow of cash and receivables from customers increases the total assets of the company; on the other side of the accounting equation, the liabilities do not change, but owner's equity increases to match the increase in total assets. Thus revenue is the gross increase in owner's equity resulting from operation of the business.

### 2.2.3. Expenses.

Expenses are the costs of the goods and services used up in the process of earning revenue. Examples include the cost of employees' salaries, advertising, rent, utilities, and the gradual wearing-out (depreciation) of such assets as buildings, automobiles, and office equipment. All these costs are necessary to attract and serve customers and thereby earn revenue. Expenses are often called the "cost of doing business", that is, the cost of the various activities necessary to carry on a business.

An expense always causes a decrease in owner's equity. The related changes in the accounting equation can be either (1) a decrease in assets, or (2) an increase in liabilities. An expense reduces assets if payment occurs at the time that the expense is incurred. If the expense will not be paid until later, as, for example, the purchase of advertising services on account, the recording of the expense will be accompanied by an increase in liabilities. ${ }^{10}$

## Table 2.2.

```
Net Income = Revenue - Expenses
```

### 2.3. Statement Of Stockholders' Equity.

Statement of stockholders' equity is more comprehensive than a statement of retained earnings. It is formatted in a manner similar to a statement of retained earnings but with columns for each element of stockholders' equity thus reports the changes in all categories of equity during the period.

The top line of the statement shows the beginning balance in each stockholders equity account. All of the transactions affecting these accounts during the year then are listed in summary form. Along with related changes in the balance of specific stockholders' equity account. The bottom line of the statement shows the ending balance in each stockholders' equity account and should agree with the amounts shown in the year-end balance sheet. It presents a more complete description of the transactions affecting the stockholders' equity.

[^8]
### 2.4. Statement Of Cash Flow.

To examine the statement of cash flows, we return to the discussion with which we began the chapter. Managers engage in three basic activities: They finance the organization to obtain the funds needed to invest in assets and operate the company. The statement of cash flow is organized around these three activities.

Each of the three main categories of cash flow includes cash receipts and cash payments. Cash receipts are positive amounts with no signs. Cash payments are negative amounts indicated by parentheses.

### 2.4.1. Operating Activities.

Operating activities create revenues and expenses in the entity's major line of business. Therefore, operating activities affect the income statement, which reports the accrual-basis effects of operating activities. The statement of cash flows reports their impact on cash. The largest cash inflow from operations is the collection of cash from customers. Smaller inflows are receipts of interest on loans and dividends on stock investments. The operating cash outflows include payments to suppliers and to employees and payments for interest and taxes.

### 2.4.2. Investing Activities.

Investing activities increase and decrease the long-term assets available to the business. A purchase or sale of plant asset such as land, a building, or equipment is an investing activity, as is the purchase or sale of an investment in the stock or bonds of another company. Investing activities on the statement of cash flows include more than the buying and selling of assets that are classified as investments on the balance sheet. Making a loan is an investing
activity because the loan creates a receivable for the lender, and collecting on the loan is also reported as an investing activity on the statement of cash flows.

### 2.4.3. Financing Activities.

Financing activities obtain from investors and creditors the cash needed to launch and sustain the business. Financing activities include issuing stock, borrowing money by issuing notes and bonds payable, buying or selling treasury stock, and making payments to the stockholders-dividends and purchases of treasury stock. Payments to the creditors include principal payments only. The payment of interest is an operating activity. ${ }^{11}$

[^9]
## III. RESEARCH METHODOLOGY.

### 3.1. Tools of Analysis.

In financial statement analysis we have some tools for analyze companies. These tools are dollar and percentage changes, trend percentages, component percentages, ratios. When we make these analyses we take help from financial books, accounting books, and some web sites such as www.ise.org and etc."

### 3.1.1. Dollar and Percentage Changes.

The dollar amount of change from year to year is significant, and expressing the change in percentage terms adds perspective.

The dollar amount of any change is the difference between the amount for a comparison year and the amount for a base year. The percentage change is computed by dividing the amount of the dollar change between years by the amount for the base year.

### 3.1.2. Trend Percentages (Horizontal Analysis).

The changes in financial statement items from a base year to following years are often expressed as trend percentages to show the extend and direction of change. Two steps are necessary to compute trend percentages. First, a base year is selected and each item in the financial statements for the base year is given a weight of $100 \%$. The second step is to express each item in the financial statements for following years as a percentage of its base-year amount. This computation consist of dividing an item such as sales in the years after the base year by the amount of sales in the base year.

### 3.1.3. Component Percentages (Vertical Analysis).

Component percentages indicate the relative size of each item included in a total. For example, each item on a balance sheet could be expressed of total assets. This shows quickly the relative importance of each type of asset as well as the relative amount of financing obtained from current creditors, long-term creditors, and stock-holders. By computing computing component percentages for several successive balance sheets, we can see which items are increasing in importance and which are becoming less significant.

### 3.1.4. Ratios.

A ratio is a simple mathematical expression of the relationship of one item to another. Every percentage may be viewed as a ratio-that is, one number expressed as a percentage of another.

Ratios are particularly important in understanding financial statements because they permit us to compare information from one financial statement with information from another financial statement. For example, we might compare net income (taken from the income statement) with total assets (taken from the balance sheet) to see how effectively management is using available resources. For a ratio to be useful, however, the two amounts being compared must be logically related. In subsequent sections of this chapter, we will make extensive use of ratios in better understanding important dimensions of an enterprise's financial activities. ${ }^{12}$

Ratios are used for measures of short-term liquidity, measures of long-term credit risk, measures of profitability and measures for evaluating the current market price of common stock.

[^10]
### 3.1.4.1. Measures of Short-Term Liquidity.

Liquidity Ratios measure the firm's ability to fulfill short-term commitments out of its liquid assets. Assets are "liquid" if they are either cash or relatively easy to convert into cash. Short-term creditors are generally very interested in the liquidity ratios. Liquidity ratios include; "current ratio, quick ratio, working capital, receivables turnover rate, days to collects average accounts receivables, inventory turnover rate, days to sell average inventory, free cash flow and operating cycle",13

Current ratio; A measure of short-term debt-paying ability.

$$
\text { Current Ratio }=\text { Current Assets } \div \text { Current Liabilities }
$$

Quick ratio; A measure of short-term debt-paying ability.

$$
\text { Quick Ratio }=\text { Quick Assets } \div \text { Current Liabilities }
$$

Working capital; A measure of short-term debt-paying ability.

$$
\text { Working Capital }=\text { Current Assets }- \text { Current Liabilities }
$$

Receivables turnover rate; Indicates how quickly receivables are collected.

$$
\text { Receivables Turnover Rate }=\text { Net Sales } \div \text { Average Accounts Receivables }
$$

Days to collect average accounts receivable; Indicate in days quickly receivables are collected.

$$
\text { Days to collect Average Accounts Receivable }=365 \text { Days } \div \text { Receivable Turnover Rate }
$$

[^11]Inventory turnover rate; Indicates How quickly inventory sells.

$$
\text { Inventory Turnover Rate }=\text { Cost of Goods Sold } \div \text { Average Inventory }
$$

Days to sell the average inventory; Indicates in days how quickly inventory.

Days to Sell the Average Inventory $=365$ Days $\div$ Inventory Turnover Rate

Operating cycle; Indicates in days how quickly inventory converts into cash.

## Free Cash Flow $=$ Net Cash from Oper. Act. - Cash Used for Inves. Act. and Dividends.

### 3.1.4.2. Measures of Long-Term Credit Risk.

Long-term solvency ratios measure the ability of the enterprise to survive over a long period of time. Long-time creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the dept at maturity. This part includes; "dept ratio and interest coverage ratio".

Debt ratio, percentage of assets financed by creditors; Indicates relative size of the equity position.

$$
\text { Debt } \text { Ratio }=\text { Total Liabilities } \div \text { Total Assets }
$$

Interest coverage ratio; Indicator of a company's ability to meet its interest payment obligations.

$$
\text { Interest Coverage Ratio }=\text { Operating Income } \div \text { Annual Interest Expense }
$$

### 3.1.4.3. Measures of Profitability.

Profitability ratios measure the success of the firm in earning a net return on sales or on investment. Since profit is the ultimate of the firm, poor performance here indicates a basic failure that, if not corrected, would probably result in the firm's going out of business. Measures of profitability include; "percentage changes, gross profit rate, operating expense ratio, operating income, net income as a percentage of net sales, earnings per share, return on assets, return on investment, return on equity and return on common stockholders' equity".

Percentage changes; that is, in net sales and net income; The rate at which a key measure is increasing or decreasing; the "growth rate".
$\%$ Changes in net sales, net income $=\$$ Amount of Chan. $\div$ Fin. Sta. Amount in Earlier year

Gross profit rate; A measure of the profitability of the company's products.

$$
\text { Gross Profit Rate }=\text { Dollar Gross Profit } \div \text { Net Sales }
$$

Operating expense ratio; A measure of the profitability to control expenses.

$$
\text { Operating Expense Ratio }=\text { Operating Expenses } \div \text { Net Sales }
$$

Operating income; The profitability of a company's "basic" business activities.

$$
\text { Operating Income }=\text { Gross Profit }- \text { Operating Expenses }
$$

Net income as a percentage of net sales; An indicator of management's ability to control costs.

$$
\text { Net income as a\% of net sales }=\text { Net Income } \div \text { Net Sales }
$$

Earnings per share; Net income applicable to each share of common stock.

Earnings Per Share $=($ Net Income-Preferred Div. $) \div$ Avr.No of Common Shares Outstanding

Return on assets; A measure of the productivity of assets, regardless of how the assets are financed.

## Return on Assets $=$ Operating Income $\div$ Average Total Assets

Return on equity; The rate of return earned on the stockholders' equity in the business.

$$
\text { Return on Equity }=\text { Net Income } \div \text { Average Total Equity }
$$

Return on common stockholders' equity; The rate of return earned on the common stockholders' equity (appropriate when company has both common and preferred stock).

Return on Common Stock. Equity $=($ Net Income-Preferred Div. $) \div$ Avr. Common Stock.Equity
3.1.4.4. Measures of for Evaluating the Current Market Price of Common Stock.

We use that "price-earnings ratio, dividend yield and book value per share" for evaluating the current market price of common stock. ${ }^{14}$

[^12]Price-earnings ratio; A measure of investors' expectations about the companys' future prospects.

$$
\text { Price-earnings Ratio }=\text { Current StockPrice } \div \text { Earnings per Share }
$$

Dividend yield; Dividends expressed as a rate of return on the market price of the stock.

$$
\text { DividendYield }=\text { Annual Dividend } \div \text { Current Stock Price }
$$

Book value per share; The recorded value of net assets underlying each share of common stock.

Book Value Per Share $=$ Common Stock.Equity $\div$ Shares of Common Stock Outstanding ${ }^{\text {IS }}$

[^13]
## IV. FINANCIAL STATEMENT ANALYSIS of MARSHALL AND ÇBS.

### 4.1. Financial Statement Analysis of Marshall.

4.1.1. Component Percentages (Vertical Analysis) for Marshall.

Component percentages (vertical analysis) indicate the relative size of each item as a percentage of gross sales in the income statement. During the calculation of component percentage; net sales, cost of goods sold, operating expense and net income have been taken as a percentage of gross sales.

Table 4.1.

|  | 1998 | 1999 | 2000 | 2001 | 2002 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Gross <br> Sales | 37,311,784 | 56,131,727 | 85,890,966 | 105,397,545 | 187,476,606 |
| Sales <br> Deduction (-) | $(7,141,590)(1$ | $(12,955,858)$ | $(22,255,493)$ | $(27,755,906)$ | $(71,064,297)$ |
| Net <br> Sales | 30,170,196 | 43,175,869 | 63,635,473 | 77,641,639 | 116,412,309 |

| Financial |  |  |  |  |  |
| Expenses (-) |  |  |  |  |  |

As shown in the above table that cost of goods sold have been decreased from $47.60 \%$ to $37.87 \%$ between 1998 and 1999. And also, operating expenses have been decreased from
$26.10 \%$ to $25.14 \%$ between these years. Therefore, Marshall's net income increased from $2.90 \%$ to $8.03 \%$.

In 1999 and 2000, Marshall's net income continued increasing. This reason is that operating expense had decreased from $25.14 \%$ to $24.04 \%$. And, financial expense had decreased from $7.07 \%$ to $2.16 \%$ between these years.

Between 2000 and 2001, net income starts to decrease. Because, cost of goods sold, operating expense and financial expenses have been increased. Cost of goods sold increased from $37.72 \%$ to $44.14 \%$, operating expense increased from $24.04 \%$ to $25.14 \%$, financial expense increased from $2.16 \%$ to $8.19 \%$. So, net income decreased from $9.79 \%$ to $1.72 \%$.

Net income has been increased one more time between 2001 and 2002 and it reached 2.68\% in 2002. This increase in net income is heavily resulted from $11.94 \%$ decrease in cost of goods sold from 2001 to 2002. And also, we observe that operating expense decreased from $25.44 \%$ to $23.67 \%$ and financial expense decreased from $8.19 \%$ to $4.82 \%$.

### 4.1.2. Trend Percentages (Horizontal Analysis) for Marshall.

Trend percentage (horizontal analysis) is a technique for evaluating a series of financial statement data over a period of time. The trend percentages are used to show the extent and direction of change in financial statements items from a base year to following years.

As shown below the table that Marshall's net sales, cost of goods sold increase steadily each years. But net incomes have been increased between 1998 and 2000. In 2001, net income decreased to $250.8 \%$. And net income continued increasing between 2001 and 2002.

Table 4.2.

### 4.1.3. TL. and Percentage Changes for Marshall.

The TL. amount of any change is the difference between the amount for a comparison year and the amount for a base year. This analysis shows TL. and percentage changes for important item each year.

Table 4.3.

|  | 1998 | 1999 | $\begin{aligned} & 1999 \text { over } \\ & 1998 \text { amount } \end{aligned}$ | $\begin{gathered} 1999 \text { over } \\ 1998 \text { (\%) } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Net Sales | 30,170,196 | 43,175,869 | 13,005,673 | 43.11\% |
| Net Income | 1,083,897 | 4,507,122 | 3,423,225 | 315.83\% |

| (Million TL.) |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | :---: | :---: | :---: |
|  | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 0}$ over <br> $\mathbf{1 9 9 9}$ amount | $\mathbf{2 0 0 0}$ over <br> $\mathbf{1 9 9 9}(\%)$ |  |  |  |
| Net Sales | $43,175,869$ | $63,635,473$ | $20,459,604$ | $47.39 \%$ |  |  |  |
| Net Income | $4,507,122$ | $8,408,188$ | $3,901,066$ | $86.55 \%$ |  |  |  |

(Million TL.)

|  | 2001 over |  |  |  |
| :--- | ---: | ---: | ---: | :---: |
| 2001 over |  |  |  |  |
| Net Sales | $63,635,473$ | $77,641,639$ | $14,006,166$ | $22.00 \%$ |
| Net Income | $8,408,188$ | $1,808,859$ | $(6,599,329)$ | $(79.49 \%)$ |

(Million TL.)

|  |  | 2002 over | 2002 over <br> 2001 (\%) |  |
| :--- | ---: | ---: | ---: | :---: |
| Net Sales | $77,641,639$ | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 1}$ amount | $\mathbf{2 0 0 1 2 , 3 0 9}$ |
| Net Income | $1,808,859$ | $5,770,670$ | $49.94 \%$ |  |

(Million TL.)

When the look at tables, the net sales have been increased $43.11 \%$ between 1998 and 1999 . And also, net sales shows that $47.39 \%$ increase between 1999 and 2000. But, net sales have been increased $22.00 \%$ between 1998 and 1999. This decrease in percentage of $47.39 \%$ to $22.00 \%$ result from showing growth rate in the net sales between 2000 and 2001 which means increase the amount of sales from 1999 and 2000 was greater than the increasing regarding 2000 to 2001 . When we look at 2002 over 2001 side, the net sales have been increased to $49.94 \%$. During 1998 to 2000, the net incomes increase. But, the net income shows $79.49 \%$ decrease between 2000 and 2001. In between 2001 and 2002, the net income increase one more time and this amount have been reached $177.60 \%$.

### 4.1.3. Ratio Analysis for Marshall.

Ratio analysis expresses the relationship among selected items of financial statement data. The relationship is expressed in terms of a percentage, a rate or a simple proportion. When we start doing ratio analysis, we are going to calculate three types of ratios. These are; short-term liquidity, long-term credit risk and profitability.

Table 4.4.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Current <br> Assets | $10,378,097$ | $26,756,307$ | $32,304,445$ | $28,340,809$ | $41,919,998$ |
| Current <br> Liabilities | $2,318,101$ | $14,982,906$ | $17,500,347$ | $12,262,713$ | $18,462,999$ |
| Current <br> Ratio | 4.48 | 1.79 | 1.85 | 2.31 | 2.27 |

Current Ratio; There is a great rate in 1998 and this is 4.48 . Current ratio has been decreased 1.79 in 1999 and 1.85 in 2000. These rates are smaller than 1998's rate. Because, many bankers and other short-term creditors traditionally have believe that a company should have current ratio of at least 2 to 1 to quality as a good credit risk. In 2001 and in 2002, Marshall's current ratios are good positions (2.31 in 2001 and 2.27 in 2002).

Table 4.5.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Quick <br> Assets | $7,697,201$ | $22,966,124$ | $25,936,531$ | $20,153,520$ | $28,810,505$ |
| Current <br> Liabilities | $2,318,101$ | $14,982,906$ | $17,500,347$ | $12,262,713$ | $18,462,999$ |
| Quick <br> Ratio | 3.32 | 1.53 | 1.48 | 1.64 | 1.56 |

Quick Ratio; According to general believes of professional financial analysts, the quick ratio should be at least 1 to 1 . When we look at Marshall's quick ratios, we see that its performance is good. Because, its quick ratios are 3.32 in 1998, 1.53 in 1999, 1.48 in 2000, 1.64 in 2001 and 1.56 in 2002.

Table 4.6.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Current <br> Assets | $10,378,097$ | $26,756,307$ | $32,304,445$ | $28,340,809$ | $41,919,998$ |
| Current <br> Liabilities | $2,318,101$ | $14,982,906$ | $17,500,347$ | $12,262,713$ | $18,462,999$ |
| Working <br> Capital | $8,059,996$ | $11,773,401$ | $14,804,098$ | $16,078,096$ | $23,456,999$ |

Working Capital; Marshall's working capitals have been increased steadily between 1998 and 2002. Namely, Marshall has enough ability to pay short-term debt.

Table 4.7.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net <br> Sales | $30,170,196$ | $43,175,869$ | $63,635,473$ | $77,641,639$ | $116,412,309$ |
| Avarage <br> A/R | $1,565,850.5$ | $2,818,308.5$ | $4,443,995$ | $6,620,281.5$ | $9,061,296.5$ |
| Receivable <br> Turnover Rate | 19.27 | 15.32 | 14.32 | 11.73 | 12.85 |

Receivable Turnover Rate; When we look at the table, we see that Marshall's receivable turnover rates have been decreased steadily between 1998 to 2001. Decreasing receivable turnover rate shows that the maturities of $\mathrm{A} / \mathrm{R}$ getting longer so the company cannot recover its receivable so early. But, the receivable turnover rate has been increased and reached 12.85 in 2002.

## Table 4.8.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days | 365 | 365 | 365 | 365 | 365 |
| Receivable <br> Turnover Rate | 19.27 | 15.32 | 14.32 | 11.73 | 12.85 |
| Days to <br> Collect A/R | 18.94 | 23.83 | 25.49 | 31.12 | 28.40 |

Days to collect $A / R$; Between the 1998 and 2001, the days to collect $\mathrm{A} / \mathrm{R}$ are increasing year by year. But, this rate has been decreased to 28.40 in 2002. Therefore, the days to collect $A / R$ have been reached to bad position than previous.

Table 4.9.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Cost of <br> Goods Sold | $17,761,218$ | $21,252,153$ | $32,395,990$ | $46,522,660$ | $60,368,269$ |
| Average <br> Inventory | $1,504,289$ | $1,834,848$ | $2,227,133$ | $4,861,753.5$ | $7,496,359.5$ |
| Inventory <br> Turnover Rate | 11.81 | 11.58 | 14.55 | 9.57 | 8.05 |

Inventory Turnover Rate; means how many times during a year the company sells its inventory the higher turnover rate means it can sell quicker its inventory and high rate is better for a company. We observe that the rate starts with 11.81 in 1998 and 8.05 in 2002 which means company sells its inventory slower and converts it into cash or $A / R$ more slowly than previous years. And also the best rate is in 2000.

Table 4.10.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days | 365 | 365 | 365 | 365 | 365 |
| Inventory <br> Turnover Rate | 11.81 | 11.58 | 14.55 | 9.57 | 8.05 |
| Days to Sell <br> Avr. Inventory | 30.91 | 31.52 | 25.09 | 38.14 | 43.34 |

Days to sell average inventory; describes in how many days the company sell its inventory and convert them into cash or $A / R$. Days to sell average inventories have been increased a little rate from 1998 to 1999. But, this rate has been decreased to 25.09 in 2000. Days to sell average inventory continued increasing in 2001 and in 2002.

Table 4.11.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days to <br> Collect A/R | 18.94 | 23.83 | 25.49 | 31.12 | 28.40 |
| Days to Sell <br> Avr. Inventory | 30.91 | 31.52 | 25.09 | 38.14 | 43.34 |
| Operating <br> Cycle | 40.85 | 55.35 | 50.58 | 69.26 | 73.74 |

Operating Cycle; refers to the time past to convert the inventory into cash. The operating cycle is 40.85 days in 1998. It has been increased approximately 15 days in 1999. But, it has been decreased 50.58 in 2000. And the other years it increases steadily.

Table 4.12.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Total <br> Liabilities | $7,857,512$ | $19,178,966$ | $20,154,197$ | $16,231,536$ | $23,726,013$ |
| Total <br> Assets | $18,153,444$ | $37,076,226$ | $19,044,338$ | $51,617,124$ | $75,255,596$ |
| Debt <br> Ratio | $43.28 \%$ | $51.73 \%$ | $41.09 \%$ | $31.45 \%$ | $31.53 \%$ |

Debt Ratio; shows what proportion of total assets are convert by debts. So, a high rate means high debts. Marshall's debt ratio is $51.73 \%$ in 1999. Namely, there was more debt in 1999 than other years.

Table 4.13.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Turkish Liras <br> Gross Profit | $12,408,977$ | $21,923,716$ | $31,239,483$ | $31,118,979$ | $56,044,040$ |
| Net <br> Sales | $30,170,196$ | $43,175,869$ | $63,635,473$ | $77,641,639$ | $116,412,309$ |
| Gross Profit <br> Rate | 0.4113 | 0.5078 | 0.4909 | 0.4008 | 0.4814 |

TL. Gross Profit Rate; Gross profit rate is the expression of gross profit in terms of percentage of net sales. It measures the profitability of company the company products. The financial analysts prefer rates between $20 \%$ and $50 \%$. According to these rates, we say that Marshall has been got gross profit rate in each year ( $41.13 \%$ in $1998,50.78 \%$ in $1999,49.09 \%$ in 2000 , $40.08 \%$ in 2001 and $48.14 \%$ in 2002).

Table 4.14.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |

| Operating <br> Expenses | $9,738,615$ | $14,112,867$ | $20,649,271$ | $26,810,005$ | $44,382,626$ |
| Net <br> Sales | $30,170,196$ | $43,175,869$ | $63,635,473$ | $77,641,639$ | $116,412,309$ |
| Operating <br> Expenses Ratio | 0.3228 | 0.3269 | 0.3245 | 0.3453 | 0.3813 |

Operating Expense Ratio; refers to the proportion of expenses in net sales. So, lower the ratio is lower the expenses. There is the lowest ratio in 1998 and there is highest ratio in 2002 for Marshall. According to these results, there are lower expenses in 1998 and there are higher expenses in 2002.

Table 4.15.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |

| Net <br> Sales | $30,170,196$ | $43,175,869$ | $63,635,473$ | $77,641,639$ | $116,412,309$ |
| Net Income as a <br> $\%$ of Net Sales | $3.59 \%$ | $10.44 \%$ | $13.21 \%$ | $2.33 \%$ | $4.31 \%$ |

Net Income as a Percentage of Net Sales; shows what proportion of net sales is reported as net income. If, there is higher percentage, there is higher income from sales than others. Marshall's the best year is 1999, because it reached $10.44 \%$. And also, Marshall got lowest percentage that it was $2.33 \%$.

Table 4.16.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Operating <br> Income | $2,670,362$ | $7,810,849$ | $10,590,212$ | $4,308,974$ | $11,661,414$ |
| Average <br> Total Assets | $15,222,027$ | $27,614,835$ | $43,060,282$ | $50,330,731$ | $63,436,360$ |
| Return on <br> Assets | 0.1754 | 0.2828 | 0.2459 | 0.0856 | 0.1838 |

Return on Assets; are used in evaluating whether management has earned a reasonable return with the assets under its control. The general believe among the financial analysts are that $15 \%$ or more return on average total assets are successful. When we look at the table, Marshall has been exceeded target percentage, because its rates are, $17.54 \%$ in 1998, $28.28 \%$ in $1999,24.59 \%$ in $2000,18.38 \%$ in 2002. But, Marshall didn't only achieve target percentages in 2001 that is $8.56 \%$.

Table 4.17.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net <br> Income | $1,083,897$ | $4,507,122$ | $8,408,188$ | $1,808,859$ | $5,021,419$ |
| Average <br> Total Equity | $8,837,968$ | $14,096,596$ | $23,393,700.5$ | $32,137,864.5$ | $43,457,585.5$ |
| Return on <br> Equity | 0.1226 | 0.3197 | 0.3594 | 0.0562 | 0.1155 |

Return on Equity; is one of the profitability measures. It shows how effectively the assets are used a return of $12 \%$ or more for strong companies. When we look at table, Marshall has been exceeded target percentage, because its rates are; $12.26 \%$ in $1998,31.97 \%$ in $1999,35.94 \%$ in 2000. But, Marshall didn't only achieve target percentages in 2001 and 2002 that are $5.62 \%$ and $11.55 \% .^{16}$

### 4.2. Financial Statement Analysis of Çbs.

### 4.2.1. Component Percentages (Vertical Analysis) for Çbs.

Component percentages (vertical analysis) indicate the relative size of each item as a percentage of gross sales in the income statement. During the calculation of component percentage; net sales, cost of goods sold, operating expense and net income have been taken as a percentage of gross sales.

[^14]Table 4.18.

|  | 1998 | 1999 | 2000 | 2001 | 2002 |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Taxation and Other <br> Legal Liabilities (-) | $0.00 \%$ | $0.00 \%$ | $0.00 \%$ | $0.00 \%$ | $0.00 \%$ |
| Net <br> Income or Loss | $(22.14 \%)$ | $(4.58 \%)$ | $(4.30 \%)$ | $(109.28 \%)$ | $(49.49 \%)$ |
|  |  |  |  |  |  |

These tables show us that cost of goods sold have been increased from $62.61 \%$ to $63.33 \%$ between 1998 and 1999. And, operating expenses have been decreased from $17.18 \%$ to $8.79 \%$
between these years. And also, financial expenses have been increased from $39.10 \%$ to $58.69 \%$ in between these years. Therefore, Çbs's net loss decreased from $22.14 \%$ to $4.58 \%$.

In 1999 and 2000, Çbs's net loss continued decreasing. This reason is that financial expense had decreased from $58.69 \%$ to $30.85 \%$. And, cost of goods sold had decreased from $63.33 \%$ to $60.22 \%$ between these years.

We observe increase in the net loss from 2000 to 2001. Because, cost of goods sold, and financial expenses have been increased. Cost of goods sold increased from $60.22 \%$ to $69.51 \%$, financial expenses increased from $30.85 \%$ to $118.85 \%$. So, net loss increased from $4.30 \%$ to $109.28 \%$. And also, this rate is the worst in the table.

Net loss has been decreased one more time between 2001 and 2002 and it reached $49.49 \%$ in 2002. This decrease in net loss is heavily resulted from $65.64 \%$ decrease in financial expenses from 2001 to 2002.

### 4.2.2. Trend Percentages (Horizontal Analysis) for Çbs.

Trend percentage (horizontal analysis) is a technique for evaluating a series of financial statement data over a period of time. The trend percentages are used to show the extent and direction of change in financial statements items from a base year to following years.

Table 4.19.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net Sales | $30,170,196$ | $43,175,869$ | $63,635,473$ | $77,641,639$ | $116,412,309$ |
| C.O.G.S. | $(17,761,218)$ | $(21,252,153)$ | $(32,395,990)$ | $(46,522,660)$ | $(60,368,269)$ |
| Gross Profit or Loss | $12,408,977$ | $21,923,716$ | $31,239,483$ | $31,118,979$ | $56,044,040$ |

| (Million TL.) |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| Net Sales | $100 \%$ | $143.1 \%$ | $210.9 \%$ | $257.3 \%$ | $385.9 \%$ |
| C.O.G.S. | $100 \%$ | $119.7 \%$ | $182.4 \%$ | $261.9 \%$ | $339.9 \%$ |
| Gross Profit or Loss | $100 \%$ | $176.7 \%$ | $251.7 \%$ | $250.8 \%$ | $451.6 \%$ |

We observe that Çbs's cost of goods sold increase steadily each year. But net sales have been increased between 1998 and 2000. In 2001, net sales decreased to $104.9 \%$. And net sales continued increasing between 2001 and 2002. Gross profits have been increased between 1998 and 2000. But, gross profits have been decreasing since 2001 ( $79.1 \%$ in 2001 and $78.6 \%$ in 2002).

### 4.2.3. TL. and Percentage Changes for Çbs.

The TL. amount of any change is the difference between the amount for a comparison year and the amount for a base year. This analysis shows TL. and percentage changes for important item each year.

Table 4.20.

|  | 1998 | 1999 | $\begin{gathered} 1999 \text { over } \\ 1998 \text { amount } \end{gathered}$ | $\begin{gathered} 1999 \text { over } \\ 1998 \text { (\%) } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Net Sales | 28,342,062 | 21,585,030 | $(1,757,032)$ | 7.53\% |
| Net Income or Loss | $(5,269,803)$ | $(995,328)$ | 4,274,475 | 81.11\% |

(Million TL.)

|  | 1999 | 2000 | $\begin{gathered} 2000 \text { over } \\ 1999 \text { amount } \end{gathered}$ | $\begin{aligned} & 2000 \text { over } \\ & 1999 \text { (\%) } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| Net Sales | 21,585,030 | 28,378,380 | 6,793,350 | 31.47\% |
| Net Income or Loss | $(995,328)$ | $(1,226,166)$ | $(230,838)$ | 23.19\% |

|  | 2000 | 2001 | $\begin{gathered} 2001 \text { over } \\ 2000 \text { amount } \end{gathered}$ | 2001 over <br> 2000 (\%) |
| :---: | :---: | :---: | :---: | :---: |
| Net Sales | 28,378,380 | 24,488,609 | $(3,889,771)$ | 13.71\% |
| Net Income or Loss | $(1,226,166)$ | $(28,009,350)$ | $(26,783,184)$ | 2184.3\% |

(Million TL.)

|  | 2001 | 2002 | $\begin{array}{\|c} 2002 \text { over } \\ 2001 \text { amount } \end{array}$ | $\begin{aligned} & 2002 \text { over } \\ & 2001 \text { (\%) } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| Net Sales | 24,488,609 | 32,036,631 | 7,548,022 | 30.82\% |
| Net Income or Loss | $(28,009,350)$ | $(16,138,836)$ | 11,870,514 | 42.38\% |

(Million TL.)

When the look at tables, the net sales have been decreased $7.53 \%$ between 1998 and 1999 . We see that, net sales increase $31.47 \%$ between 1999 and 2000. But, net sales decrease $13.71 \%$ between 2000 and 2001. And we see that, net sales increase one more time and it is $30.82 \%$.

Net loss decreases $81.11 \%$ between 1998 and 1999. But, net loss increases one more time between 1999 and 2001. And also, it is the worst percentage from 2000 to 2001 that is $2184.3 \%$. When we look at between 2001 and 2002, net loss increases again.

### 4.2.4. Ratio Analysis for Çbs.

Ratio analysis expresses the relationship among selected items of financial statement data. The relationship is expressed in terms of a percentage, a rate or a simple proportion. When we start doing ratio analysis, we are going to calculate three types of ratios. These are; short-term liquidity, long-term credit risk and profitability.

Table 4.21.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Current <br> Assets | $15,919,323$ | $15,339,689$ | $11,840,172$ | $11,870,749$ | $16,286,925$ |
| Current <br> Liabilities | $16,457,952$ | $14,661,716$ | $10,653,716$ | $32,807,895$ | $61,275,848$ |
| Current <br> Ratio | 0.97 | 1.05 | 1.11 | 0.36 | 0.27 |

Current Ratio; Many bankers and other short-term creditors traditionally have believe that a company should have current ratio of at least 2 to 1 to quality as a good credit risk. According to this sentence, Çbs has been achieved the target rates only in 1999 and 2000 and these are 1.05 and 1.11. Other years Çbs aren't good financial position for current ratio.

Table 4.22.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Quick <br> Assets | $12,630,540$ | $8,704,799$ | $3,540,218$ | $4,439,071$ | $9,735,338$ |
| Current <br> Liabilities | $16,457,952$ | $14,661,716$ | $10,653,716$ | $32,807,895$ | $61,275,848$ |
| Quick <br> Ratio | 0.77 | 0.59 | 0.33 | 0.14 | 0.16 |

Quick Ratio; According to general believes of professional financial analysts, the quick ratio should be at least 1 to 1 . When we look at Çbs's quick ratios, we see that its performance is bad. Because, its quick ratios are 0.77 in 1998, 0.59 in 1999, 0.33 in 2000, 0.14 in 2001 and 0.16 in 2002.

Table 4.23.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Current <br> Assets | $15,919,323$ | $15,339,689$ | $11,840,172$ | $11,870,749$ | $16,286,925$ |
| Current <br> Liabilities | $16,457,952$ | $14,661,716$ | $10,653,716$ | $32,807,895$ | $61,275,848$ |
| Working <br> Capital | $(538,629)$ | 677,973 | $1,186,856$ | $(20,937,146)$ | $(44,988,923)$ |

Working Capital; Çbs's working capital has been decreased in 1998. But, its working capitals have been increased between 1999 and 2000. Çbs's working capitals have been decreasing since 2001. Therefore, Çbs hasn't enough ability to pay short-term debt in 1998, 2001 and 2002. But, it has only enough ability to pay short-term debt in 1999 and 2000.

Table 4.24.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net <br> Sales | $23,342,062$ | $21,585,030$ | $28,378,380$ | $24,488,609$ | $32,036,631$ |
| Avarage <br> A/R | $1,623,004.5$ | $1,996,333.5$ | $1,415,346$ | 534,910 | $1,755,347.5$ |
| Receivable <br> Turnover Rate | 14.38 | 10.81 | 20.05 | 45.78 | 18.25 |

Receivable Turnover Rate; When we look at the table, we see that Çbs's receivable turnover rates decrease from 1998 to 1999 . Çbs achieves 20.05 and 45.78 in 2000 and 2001. But, its receivable turnover rate decreases one more time and it reaches 18.25 in 2002.

Table 4.25.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days | 365 | 365 | 365 | 365 | 365 |
| Receivable <br> Turnover Rate | 14.38 | 10.81 | 20.05 | 45.78 | 18.25 |
| Days to <br> Collect A/R | 25.38 | 33.77 | 18.20 | 7.97 | 20.00 |

Days to collect $A / R$; Between the 1998 and 1999, the days to collect $\mathrm{A} / \mathrm{R}$ increases. But, between the 2000 and $2001 \mathrm{~A} / \mathrm{R}$ decreases. It increases one more time in 2002.

Table 4.26.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Cost of <br> Goods Sold | $14,906,475$ | $13,771,980$ | $17,178,105$ | $17,816,693$ | $25,405,904$ |
| Average <br> Inventory | $2,174,752$ | $4,456,752.5$ | $6,936,901.5$ | $7,053,988$ | $5,274,843$ |
| Inventory |  | 3.09 | 2.48 | 2.53 | 4.82 |
| Turnover Rate | 6,85 |  |  |  |  |

Inventory Turnover Rate; means how many times during a year the company sells its inventory the higher turnover rate means it can sell quicker its inventory and high rate is better for a company. We observe that the rate starts with 6.85 in 1998 that this rate is the best in each year and 4.82 in 2002.

Table 4.27.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days | 365 | 365 | 365 | 365 | 365 |
| Inventory <br> Turnover Rate | 6.85 | 3.09 | 2.48 | 2.53 | 4.82 |
| Days to Sell <br> Avr. Inventory | 53.28 | 118.12 | 147.18 | 144.27 | 75.73 |

Days to sell average inventory; describes in how many days the company sell its inventory and convert than into cash or $A / R$. Days to sell average inventories have been increased from 1998 to 2000 that are 53.28 in 1998, 118.12 in 1999 and 147.18 in 2000. But, they have been decreasing since 2000 that are 144.27 in 2001 and 75.73 in 2002.

Table 4.28.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Days to <br> Collect A/R | 25.38 | 33.77 | 18.20 | 7.97 | 20.00 |
| Days to Sell <br> Avr. Inventory | 53.28 | 118.12 | 147.18 | 144.27 | 75.73 |
| Operating <br> Cycle | 78.66 | 151.89 | 165.38 | 152.24 | 95.73 |

Operating Cycle; refers to the time past to convert the inventory into cash. The operating cycle is 78.66 days in 1998. It has been increased from 78.66 days to 165.38 days between 1998 and 2000. But, latter years it is decreasing steadily.

Table 4.29.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Total <br> Liabilities | $16,860,940$ | $21,898,730$ | $21,816,509$ | $49,821,774$ | $70,368,548$ |
| Total <br> Assets | $17,918,036$ | $22,254,483$ | $14,871,337$ | $15,817,244$ | $20,225,182$ |
| Debt <br> Ratio | $94.10 \%$ | $98.40 \%$ | $146.70 \%$ | $317.98 \%$ | $347.93 \%$ |

Debt Ratio; shows what proportion of total assets are convert by debts. So, a high rate means high debts. Çbs's debt ratio is $347.93 \%$ in 2002. Namely, there are more debts in 2002 than other years.

Table 4.30.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Turkish Liras <br> Gross Profit | $8,435,587$ | $7,813,050$ | $11,200,275$ | $6,671,916$ | $6,630,727$ |
| Net <br> Sales | $23,342,062$ | $21,585,030$ | $28,378,380$ | $24,488,609$ | $32,036,631$ |
| Gross Profit <br> Rate | 0.3614 | 0.3620 | 0.3947 | 0.2724 | 0.2070 |

TL. Gross Profit Rate; Gross profit rate is the expression of gross profit in terms of percentage of net sales. It measures the profitability of company the company products. The financial analysts prefer rates between $20 \%$ and $50 \%$. According to these rates, we say that Çbs has been got gross profit rate in each year ( $36.14 \%$ in $1998,36.20 \%$ in $1999,39.47 \%$ in 2000 , $27.24 \%$ in 2001 and $20.70 \%$ in 2002).

Table 4.31.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Operating <br> Expenses | $4,091,129$ | $1,911,222$ | $4,988,322$ | $4,221,618$ | $5,938,367$ |
| Net <br> Sales | $23,342,062$ | $21,585,030$ | $28,378,380$ | $24,488,609$ | $32,036,631$ |
| Operating <br> Expenses Ratio | 0.1753 | 0.0885 | 0.1758 | 0.1724 | 0.1854 |

Operating Expense Ratio; refers to the proportion of expenses in net sales. So, lower the ratio is lower the expenses. There is the lowest ratio in 1999 and there is highest ratio in 2002 for Çbs. According to these results, there are lower expenses in 1999 and there are higher expenses in 2002.

Table 4.32.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net <br> Loss | $5,269,803$ | 995,328 | $1,226,166$ | $28,009,350$ | $16,138,836$ |
| Net <br> Sales | $23,342,062$ | $21,585,030$ | $28,378,380$ | $24,488,609$ | $32,036,631$ |
| Net Loss as a <br> $\%$ of Net Sales | $22.58 \%$ | $4.61 \%$ | $4.32 \%$ | $114.38 \%$ | $50.38 \%$ |

Net Income as a Percentage of Net Sales; shows what proportion of net sales is reported as net income. If, there is higher percentage, there is higher income from sales than others. But,

Çbs hasn't got net income between 1998 and 2002. So, we can say that Çbs's net loss from sales are better in 2000 than other years. And, Çbs's net loss from sales are the worst in 2001.

Table 4.33.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Operating <br> Income | $4,344,458$ | $5,901,20$ | $6,211,953$ | $2,450,298$ | 692,360 |
| Average <br> Total Assets | $14,358,417$ | $20,086,259.5$ | $18,562,910$ | $15,344,290.5$ | $18,021,213$ |
| Return on <br> Assets | 0.3026 | 0.2938 | 0.3346 | 0.1597 | 0.0384 |

Return on Assets; are used in evaluating whether management has earned a reasonable return with the assets under its control. The general believe among the financial analysts are that $15 \%$ or more return on average total assets are successful. When we look at the table, Çbs has been exceeded target percentage, because its rates are; $30.26 \%$ in 1998, $29.38 \%$ in 1999 , $33.46 \%$ in $2000,15.97 \%$ in 2001. But, Çbs didn't only achieve target percentages in 2002 that is $3.84 \%$.

Table 4.34.

|  | $\mathbf{1 9 9 8}$ | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Net <br> Loss | $5,269,803$ | 995,328 | $1,226,166$ | $28,009,350$ | $16,138,836$ |
| Average <br> Total Equity | $1,788,489.5$ | $706,424.5$ | $3,294,709.5$ | $20.474,851$ | $42,073,948$ |
| Return on <br> Equity | 2.9465 | 1.4090 | 0.3722 | 1.3680 | 0.3836 |

Return on Equity; is one of the profitability measures. It shows how effectively the assets are used a return of $12 \%$ or more for strong companies. When we look at table, Çbs never
exceeds target percentage, because its rates are in minus. These are; (294.65\%) in 1998, $(140.90 \%)$ in $1999,(37.22 \%)$ in $2000,(136.80 \%)$ in 2001 and $(38.36 \%)$ in $2002 .{ }^{17}$

[^15]
## V. LIMITATIONS.

We took the between 1998 and 2002 in this project. Because, Çbs's and Marshall's income statement include only these year in financial web pages.

We didn't reach some information about the annual report of these companies. Because, the some reports are included company's private policies.

There are some partial statement but they are not useful for analysis since the Turkish accounting system is entirely different from European and American accounting system. However, it becomes possible to reach the financials of the company necessary for analysis by the help of other limited resources. Such as, web pages of a few investment assistance companies.

## VI. CONCLUSION AND RECOMMENDATION.

Financial statement analysis involves all the techniques employed by users of the financial statement financial statements to show important relations. Financial measures that are used in the financial statement analysis enable us to rank corporate performance.

In this project is divided into tree sections. These are, financial statement, research methodologies section and financial statement analysis of Marshall and Çbs provided us a general view of statements, tools of analysis use of these information in analyzing financial position of Marshall and Çbs.

The internal and external painting sector has very good market in Turkey. So, there are many companies in painting market. Because, the painting is everywhere. For example; on houses' walls, on furnitures, on cars and etc... But, several companies have better position than other companies in competitive painting market.

Çbs and Marshall paint manufacturing companies are rooted and old companies in Turkey. These companies are private companies and their stocks are traded in Istanbul Stock Exchange. We think that Çbs and Marshall are leaders in painting market in Turkey. So, we chose Çbs and Marshall paint manufacturing companies.

By comparing two companies, we will to understand the essence and purpose of financial statement analysis more clearly. Here to be able to look at this issue from the point of an investor, I will include comparison of Marshall with another giant competitor Çbs. The comparison part includes; component percentage (vertical analysis), trend percentage (horizontal analysis), dollar and percentage changes and ratios analysis with short-term liquidity, long-term solvency and profitability ratios.

When we look at the component percentage of both companies, Marshall is better than Çbs. Because, Marshall's net income is 2.68 \%, but Çbs has got net loss in 2002 and its net loss (49.49\%). When we look at financial statement analysis of Marshall and Çbs, we can see their results and reasons.

The second stage of comparison part is trend percentages. When we look at the both tables of Marshall and Cbs, we see that again Marshall is better than Çbs. According to the percentages $78.6 \%$ in 2002 for Çbs, but $451.6 \%$ in 2002 for Marshall.

The third stage of comparison part is TL. and percentage changes for Çbs and Marshall. When we look at these table, we see that Marshall has a good performance than Çbs. How did we understand these, we looked at the percentage changes of net sales and net income. In 2002 over 2001 , net sales $30.82 \%$ and net income $42.38 \%$ for Çbs; net sales $49.94 \%$ and net income $177.60 \%$ for Marshall.

The last stage of comparison part is ratio analysis. As I mention before, ratio analysis include 4 parts. These are; measurement of short-term liquidity, measurement of long-term credit risk, measures of profitability measures of for evaluating the current market price of common stock.

When we look at the both tables of Marshall and Çbs for short-term liquidity, we see that Marshall has enough ability to pay short-term debt in 2002 (namely, it has got enough liquidity). Because, its ratios have been exceeded the acceptable criterias; for current ratio, 2.27, for quick ratio, 1.56 in 2002. And also, Marshall's working capital is higher than other years $23,456,999$. When we look at Çbs, we cannot see same success. Its ratios are very bad; for current ratio, 0.27 , for quick ratio, 0.16 and working capital $(44,988,923)$ in 2002.

When we look at the both tables of Marshall and Çbs for long-term credit risk, we see that the percentage of total assets to total liabilities of Marshall is better than Çbs. Marshall offers less risk to long-term creditors.

And finally, When we look at the both tables of Marshall and Çbs for their profitability, we see that, Marshall is more profitable than Çbs in 2002. Because Marshall's gross profit rate is $48.14 \%$ but Çbs's gross profit rate is only $20.70 \%$ in 2002 . Operating expense ratio measures the management ability to control the expenses. Marshall's net sales are higher than Çbs for 2002. But, Çbs's operating expenses are lower than Marshall. When we compare the percentages, Çbs operating expenses ratio is better than Marshall's. But, if we see general in the ratios Marshall has more profitability position than Çbs. So, Marshall may more preferable by investors.

After all of the analysis of both companies, we have picture of which company better in mind. Marshall company achieves powerful ratios in short-term liquidity measures, long-term credit risk and profitability measures.

When we look at the Marshall, we see that liquidity ratio is very slow. If, Marshall increase the receivable turnover rate by this way to decrease the day to collect $A / R$. So, liquidity is increasing.

When we look at the Çbs, we see that it hasn't been reaching net incomes since 1998. If Çbs decreases particularly cost of goods sold and other expenses, it will reach net income.
