ABSTRACT

As the information age has affected every aspect of our life, the needs for computerizing many information systems has risen.

One of the most important branches that are affected by information revolution is the data base management system.

This project is concerned for using computer program in teacher affairs system.

And it is written using FoxPro programming language, which are the best and strongest database languages.

This project is complete teacher affairs system, that covers all services needed in most universities, such as the general services listing insertion searching and reports and other services which will be done to the crewmembers by this work (program).

Before I coming to this project I sow how is the university system Using I found many problems in the using system like losing teacher file or

Detected by unknown reason so I went to the registration department to ask about the using program or system but no one strayed to help me so I decide

To make this project to help them in the registration procedures and I hope

And I wish its will be using from the university.

The implementation of the design on the computer using FoxPro programming.

AKNOWLEDGEMENT

Firstly I would like to thank so much to my family and especially to my dear parents who supported me through all my life .

I would like to thank my supervisor Miss. Besime Erin who has provided me with invaluable help and advice through all stages of my under graduate study. She taught me FoxPro in tow courses and then completed her favor by taking the responsibility of supervising me in my final graduation project.

And special complements and greeting to my advisor
Mr. Tayseer alshanableh

Special thanks for my teachers who's encourage me and create me sup portly. And Special thanks to all my friends whose stand beside me and help in the hard time due preparing my project.

Particular mention must be mode of: Ibaid Al Soud because he helped me to finish this project.

INTRODUCTION

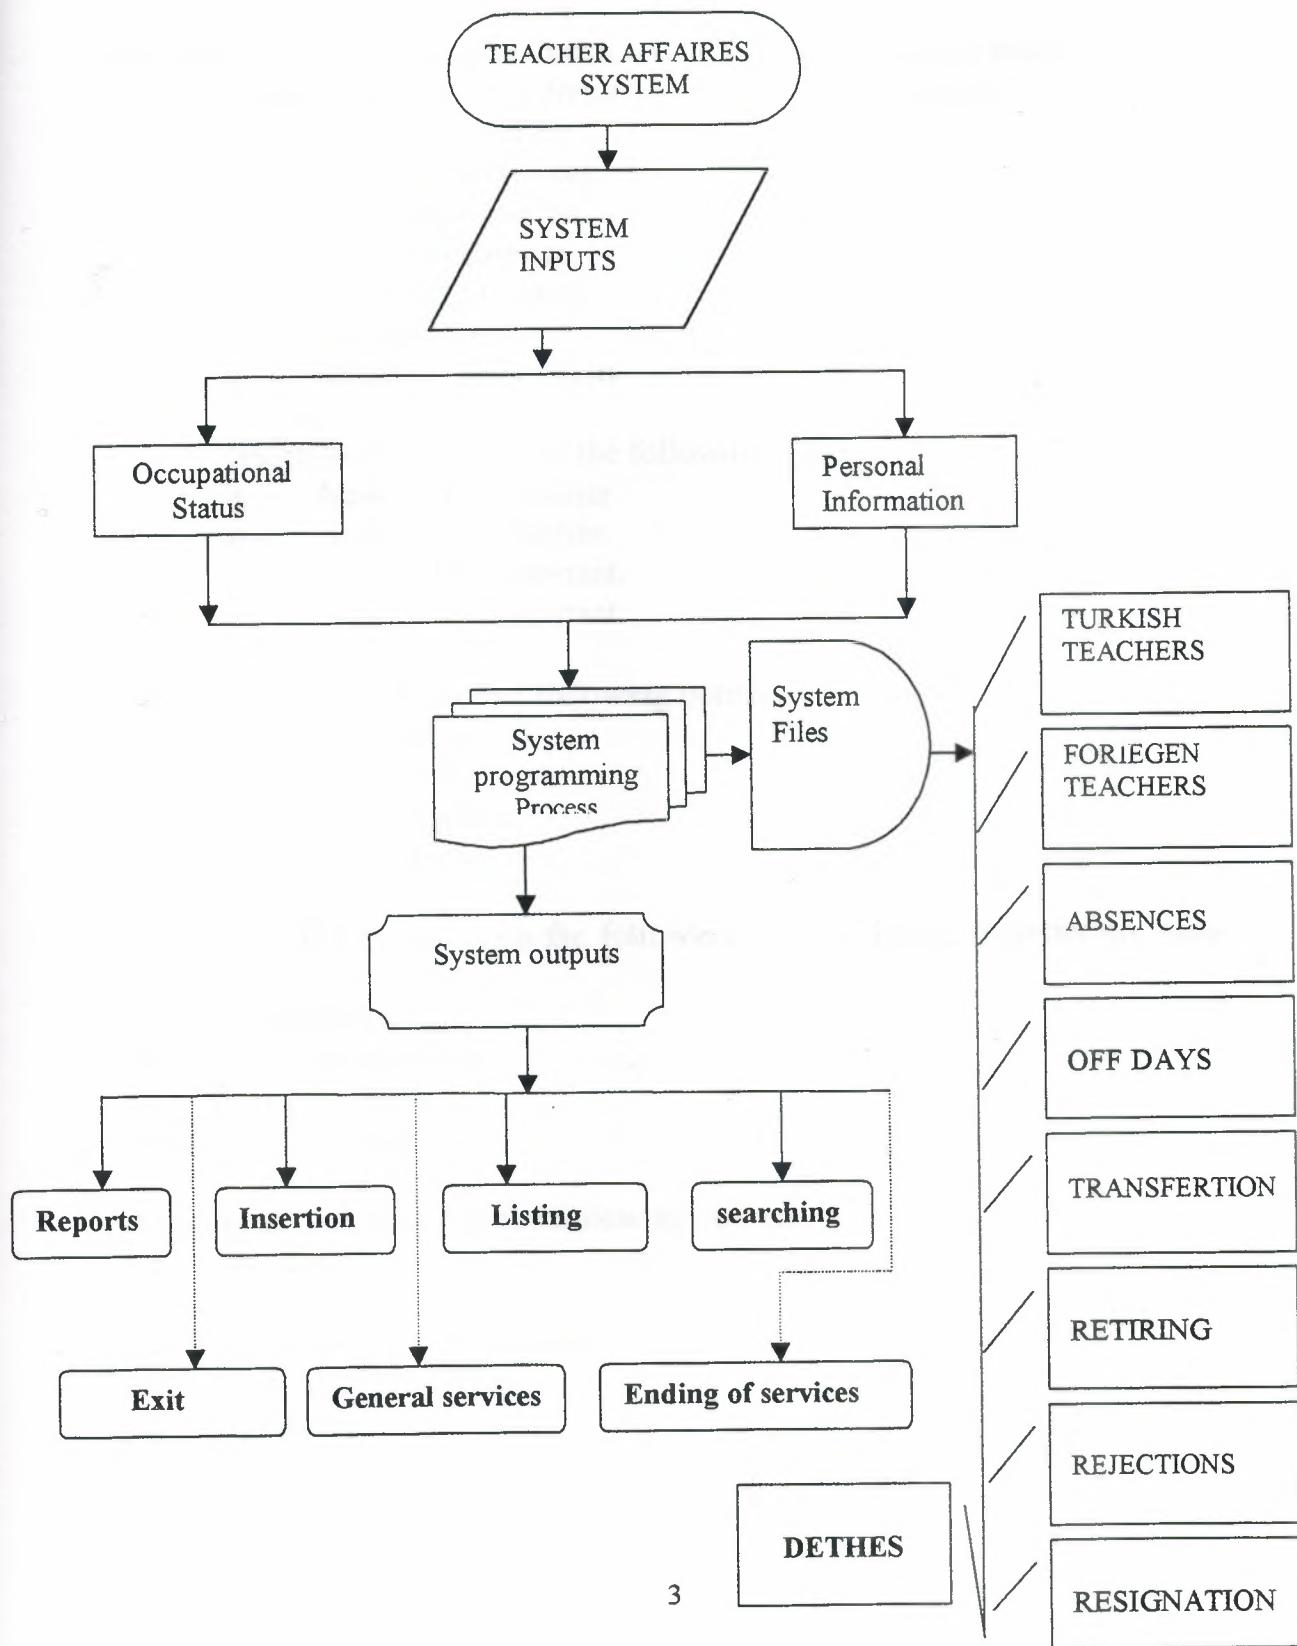

In this project study, I found lots of questions, I did understand how is the Availability of information's is getting very important, the study and the Analyzing of any system is the answer of the system, the updated project is the changing from manual to mechanism.

Now a day's, the computer science both hardware and software is being developed over the past years, programming is always providing the scientists by a systematic development, in my project I did construct special programmed related to teacher affair system, it is within this framework that the history of teacher affair system development should be examined, new concepts in system design have been developed more recently in an effort to meet the changing preferences and new characteristics of the traveling public. The teacher affair system consist of many , my project programmed resume that that briefly in a quick time in order to have quick and economic services, on the other hand, the hotel development is suitable for researchers and students in computer science, the development of management programs is designed to help compute professionals who want to learn about this exciting field and to serve as a basic reference.

The aim of my project how to create and to develop a project in a scientific method to introduce the gab between scientific theoretical life and work normal life. In my project, I did construct teacher affair system program because the availability of information is incrementally important in all over the world, how to make an cays process in order to have a quick research, data process, analysis process.

Finally, full file enclosed, full details about the project.

MAIN FLOCHART

System contents:

The system consist of the main menu screen which includes six main options:

1. General Services: It's divided to the following options:
 - a. Members Transfer.
 - b. Members reterment.
 - c. Members rejection.
 - d. Members absence.
 - e. Members off days.
 - f. Members deth.
 - g. Members resignation.
2. Insertion: It's divided to the following options.
 - a. New Turkish teacher.
 - b. New foriger teacher.
 - c. New turkish assistant.
 - d. New foriger assistant.
3. Listing: It's divided into the following options.
 - a. Foreigner teachers.
 - b. Turkish teachers.
 - c. Foreigner assistants.
 - d. Turkish assistants.
4. Searching: It's divided into the following options:(name, member no, pass-no).
 - a. Foreign teachers.
 - b. Foreign assistants.
 - c. Turkish assistants.
 - d. Turkish teachers.
5. Reports: It's divided into the following options.
 - a. Wishes.
 - b. Visitor.
 - c. To whom it may concern.
 - d. Manager of airlines.
 - g. Transportation.

The system of the academic crew:

Introduction: firstly, the definition of the studied system is the system which is coordinate the academic crew members, therefore, the system has been constructed to treat the data which belongs to the academic crew, if it's financial data, personal data or scientific data according to scientific activity's for the member of the academic crew.

The main target of all of this in order to have easier and quick information's for the member,

Also this will influence to have an administrative decision for the Academic member such as salaries, promotion and lot's of various administrative affaires

Firstly: the idea of the current system

Which's application in the university after the questioning of Mr. There is no mechanical system in the university system working directly with the member as following.

Firstly: for the foreigners {outside contracting}.

In the summer holiday's the dean of the faculties or the deputy's use to travel to some countries and their they use make some advertisement in the local newspaper about the seeking requirement's "vacancy's" then the member use to apply for the work in the university and then his/her documents use to be sent to the administration department of the faculty, then the university council will be held to have the agreement and then again his/her documents will be sent back again the faculty and after his/her arrival to the counting some procedure will be taken over.

And he/she will be given the followings:

Status information data (document No.)

Special paper for the start of work (document No...)

Complete information's form (document No...)

After the completion of the above named documents, it will be sent to the Department which's he/she will work in it, and then he or she will start the work and will have his/her academic schedule.

Secondly: for the local's (Turkish):

Firstly, the faculty will advertise in the local news paper that they are seeking a member of academic crew due to his/she degree (prof. Dr. technical assistant) and also due to his/her

Specialization then the member will apply for this vacancy with his/her documents, and then the university council will be held in order to make the decision for the agreement then, the faculty council will be for the same reason Then the member will go the administration and he/she will be given the following documents:

Status information data (document No.)

Special paper for the start of work (document. No.)

Complete information's forms (document. No.)

The disadvantages of the old system:

For any system you can find disadvantages and for this system as following:

There are no issuing special forms for the member who's nearly to retire.

The accounting of salaries & financial benefits for the member manually, this will affect the quick work finish and will increase the errors.

The need able for an agent reports some times, the searching will be take time and will loose the efficiency of the employee.

The keeping of member documents documents and forms inside charts or files in the departments, this way participate in loosing the papers.

The suggested system: -

The target of the new operation system is to improve the past system, and because there is no mechanism system on the past, we will concentrate to construct mechanism system in order to improve the educational process. And also the other target to decrease the human work for preparing statistics or produce various reports about the process.

The main target of the system: -

For preparing lists of names for the local (Turkish) academic crewmembers.

For preparing lists of names for the foreigners academic crewmembers.

For preparing lists of names for academic crew members which's contracted locally.

For preparing lists of names for academic crew members which's accommodated inside the campus.

For preparing lists of names for academic crewmembers whose having instead of accommodation.

For preparing lists of names for academic crew whose capacity of credit hours in one semester.

For preparing lists of scientific activity's and scientific researches for the academic crew.

For preparing lists of the academic crew members who's continuing of renewing the contract.

For preparing lists of the academic crew designate the scientific degree for the member.

For preparing lists of the academic crew members who's ended their contracts.

For saving unic data about the workers and their professions or occupations.

a) **Personal data like:** sex (male, female), academic degree (post graduate, normal graduate)

b) **Occupation data:**

c) For following and analyzing the movements of individuals like (promotion, transfer, end of service, retiring, end of semester contract, absent of work)

d) For following and analyzing the absents of workers like annual leave, emergency leave, sick leave, absent of work, paid leave, unpaid leave.

e) For saving the data for past experience and professions.

The structure of the system:

The system consist of files which's contains data for the academic crew members and these data including also files for formerly historical data of the academic crew and the retired & terminated data will be kept within system files in archive and easy to return it when it's needed, and it's useful for any statistics futurity.

How is the system work's: -

The first stage in using the computer for treating any data is the insert of data to save it in related save box then to have for any need able.

System Inputs: -

Insert the name of the member and his/her number the new system working on limited number for any category like professors "PhDs holders" category, their numbers locate between 100,200 in order to make an easy searching for any member.

Insert to understand about the members names that's ended their contracts.

Insert to understand about the members names that's living in campus.

Insert member number who's stopped his /her application.

Insert the names of the member and credit hours, which's teaching in one semester.

Insert the name of member and his/her number and the scientific activity in order to designate the member who's having special degree.

Insert the member and the period of contract in order to know when the contacting complete.

Insert to understand the names of member who's willing to continue and to renew the contracts.

Any new additional information about members.

System outputs:

Identification of names for academic crewmembers.

Identification of names for academic crewmembers whose associated in conference, scientific conventions.

Print out statistics reports for work leave.

Print out reports of all academic crew names.

Print out reports of local (Turkish) academic crew names.

Print out statistical report about the individuals absents and the reason of absent.

Identification of names for academic members who's retired up to date.

Identification of names for academic crewmembers who's having high degrees

In the first selection of the listing menu is (list for all the Turkish's (locals) and foreigner's academic crewmembers as shown in the following query:

- List of foreigner teachers:

The screenshot shows a Microsoft Access application window titled "Query". Inside the window, there is a table with three rows of data. The table has three columns: "Name", "Surname", and "Teacher_no". The data is as follows:

Name	Surname	Teacher_no
hammed	assi	7767
mortaza	nolban	34567

```
SELECT New_for.name, New_for.surname, New_for.teacher_no;  
FROM New_for;  
WHERE New_for.name = New_for.name
```

Here in the second screen of the listing menu is list for all Turkish academic crewmembers by Name, surname and member no:

Name	Surname	Teacher_no
fatih	karakasli	7639
ayshan	sheker	5555
ALI	SERBIST	5555

```
SELECT New_tr.name, New_tr.surname, New_tr.teacher_no;  
FROM New_tr;  
WHERE New_tr.name = new_tr.name
```

The third selection of the listing menu is listing for the foreigner assistants by Owen data:

```
SELECT For_ass.name, For_ass.surname, For_ass.ass_no, For_ass.dep_facult;  
FROM For_ass;  
WHERE For_ass.name = for_ass.name
```

The last selection of the listing menu is the list of Turkish assistant which includes all the data information:

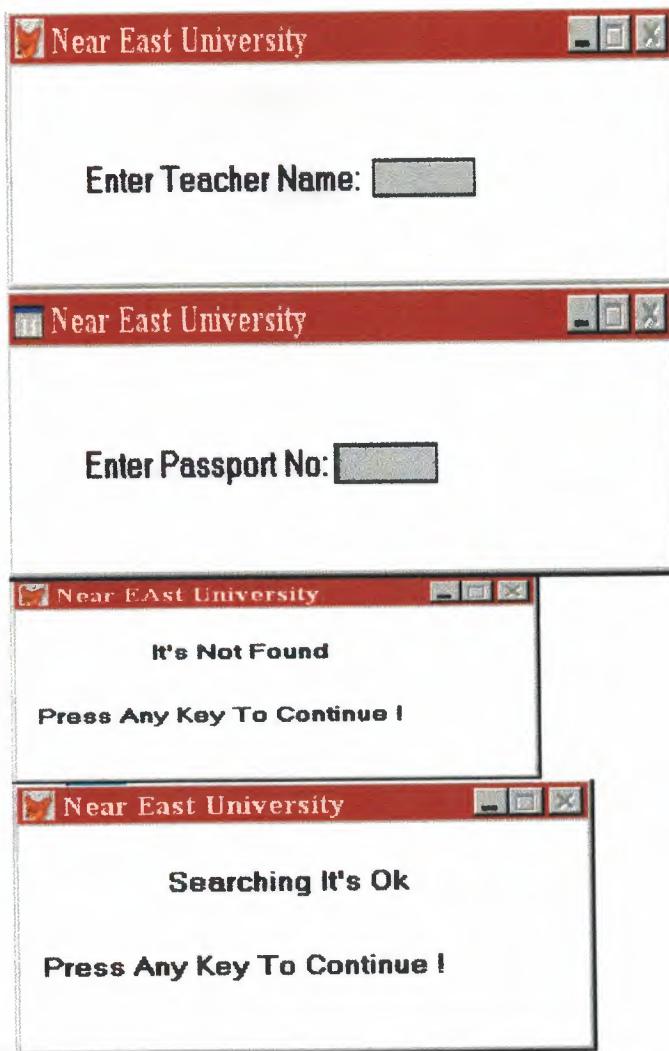

```
SELECT Tur_ass.name, Tur_ass.surname, Tur_ass.ass_no, Tur_ass.dep_faculty;  
FROM Tur_ass;  
WHERE Tur_ass.name = tur_ass.name
```

4. THE SEARCHING MENU:

If the selection is '4' from the main menu its show up the searching menu which allow the user to search for the teachers and assistant by name member no and pass no:

When we select any option from the searching menu we will have the following screens to show how the searching procedures will be:

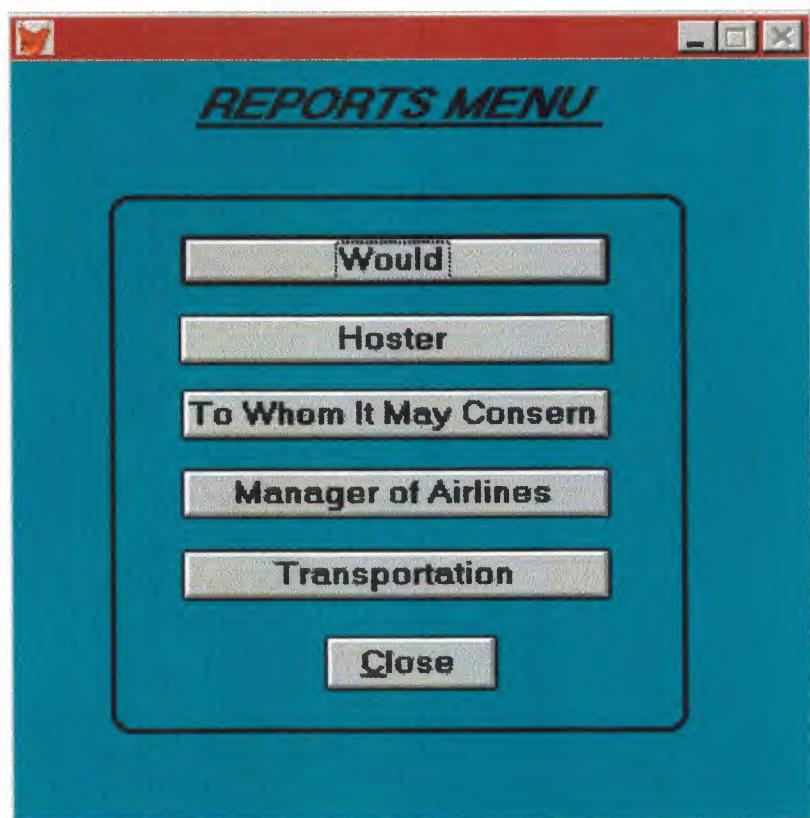

Here is the query, which will be shown after entering the correct data to the searching menu:

Teacher no	Name	Surname	Nation	Birth_dat	Add_kind	Local_add	Tel
-	fatih	karakasit	syrian	03/08/74	lifke	23 med.cad	
7639	ayshan	sheker	turkish	06/01/70	izair	4 sh_ali sok	
5555	ALI	SERBIST	SYPIRIAN	01/01/76	NICOSIA ME	SKOMSAL\4	

5. THE REPORTS MENU:

If the selection is '5' from the main menu its show up the reports menu which includes 5 reports that's use to make all the procedures to done direct to the printer:

USI

IF THE SELECTION IS '6' FROM THE MAIN MENU WE WILL EXIT
FROM THE SYSTEM TO THE MATHER SCREEN FOXPRO:

CONCLUSION

As a result, the second goal is to present an expert system, the programmed project shows how it's can serve as a knowledge base for an expert system that does classification tasks.

All the chapters which is construct my project programmed which was covering teacher affair system programmed.

all the aspects and steps that must be taken in the planning and development, new concepts in teacher affair system design, teacher affair system development.

as a result to the programmer when he/she construct a programmed in order to serve such institutions like teacher affair system.

the big advantage of this approach is the application of the teacher affair system programmed it self.

The main focus of this project is the performance the teacher affair system-programmed parts gives basic definitions and concepts that almost every one interested.

Finally, I am thanking my supervisor, **MISS BESIME ERIN** because she did build and create my deep gratitude and support.

On last, it is really appreciation to my family for their encouragement and support.
