## **INTRODUCTION**

I used DELPHI programming language for writing this program and MY SQL database that has connection with DELPHI programming.

Aim of this project is: Collect the customer information, reservation detail and payment with the digital environment and automatically give invoice and receipt to the customer. Program will work with the customer base. Each customer has a unique customer id and a specific reference code for each operation. With this customer id we will see all operation that customer did. Reference code is used to see the specific operation of the customer did. Use customer number and name we will see all operation, payment or receipt with the customer.

If needed in the analysis part: You can search for a customer, for office, specific dates or sale type.

## **DESIGN OF THE SYSTEM**

This program is made for the Near East Tourism Agency Dorana Tourism. In this program I will try to solve their needs and wants. This project thinks to give the usage of the Dorana Tourism in the future. With this program all operation and payments will be controlled and recorded more effectively.

Program language of this project is Delphi and the database is MY SQL.

Basic Component of the program:

Analiz  
Bilet Rezervasyonu  
Otel Rezervasyonu  
Fatura  
Makbuz

## **EXPLANATION**

**The minimum requirement of the system are as follows:**

Intel PII Processor  
350 MHZ  
128 MB Ram  
20 GB Hard Disk  
14" Monitor  
Microsoft Windows XP

**The Recomendend requirement of the system are as follows:**

Intel PIV Processor  
2.4 MHZ  
1028 MB Ram  
80 GB Hard Disk  
17" Monitor  
Microsoft Windows Vista

# Reservation System

## 1. Project Identification And Selection

Aim of this Project:

Aim of this project is: Collect the customer information, reservation detail and payment with the digital environment and automatically give invoice and receipt to the customer. Program will work with the customer base. Each customer has a unique customer id and a specific reference code for each operation. With this customer id we will see all operation that customer did. Reference code is used to see the specific operation of the customer did. Use customer number and name we will see all operation, payment or debt with the customer.

The existing system's handicap is receipt and invoices are written by the hand. And Payments, receipt, bills are stored with hard copy. But in this system all data are stored in database.

## 2. Project Initiation And Planning

Technical Feasibility:

The hardware necessary for the system are as follows:

- Computers for sales person
- A printer to take print out receipts and bill
- A computer to store database

### Operational Feasibility:

The standard computer knowledge is enough to use this system.  
System is clear and user friendly.

### Economical Feasibility:

All the expences will be afforded by the Near East University.

## **3. Analysis**

### The Requirement Determination

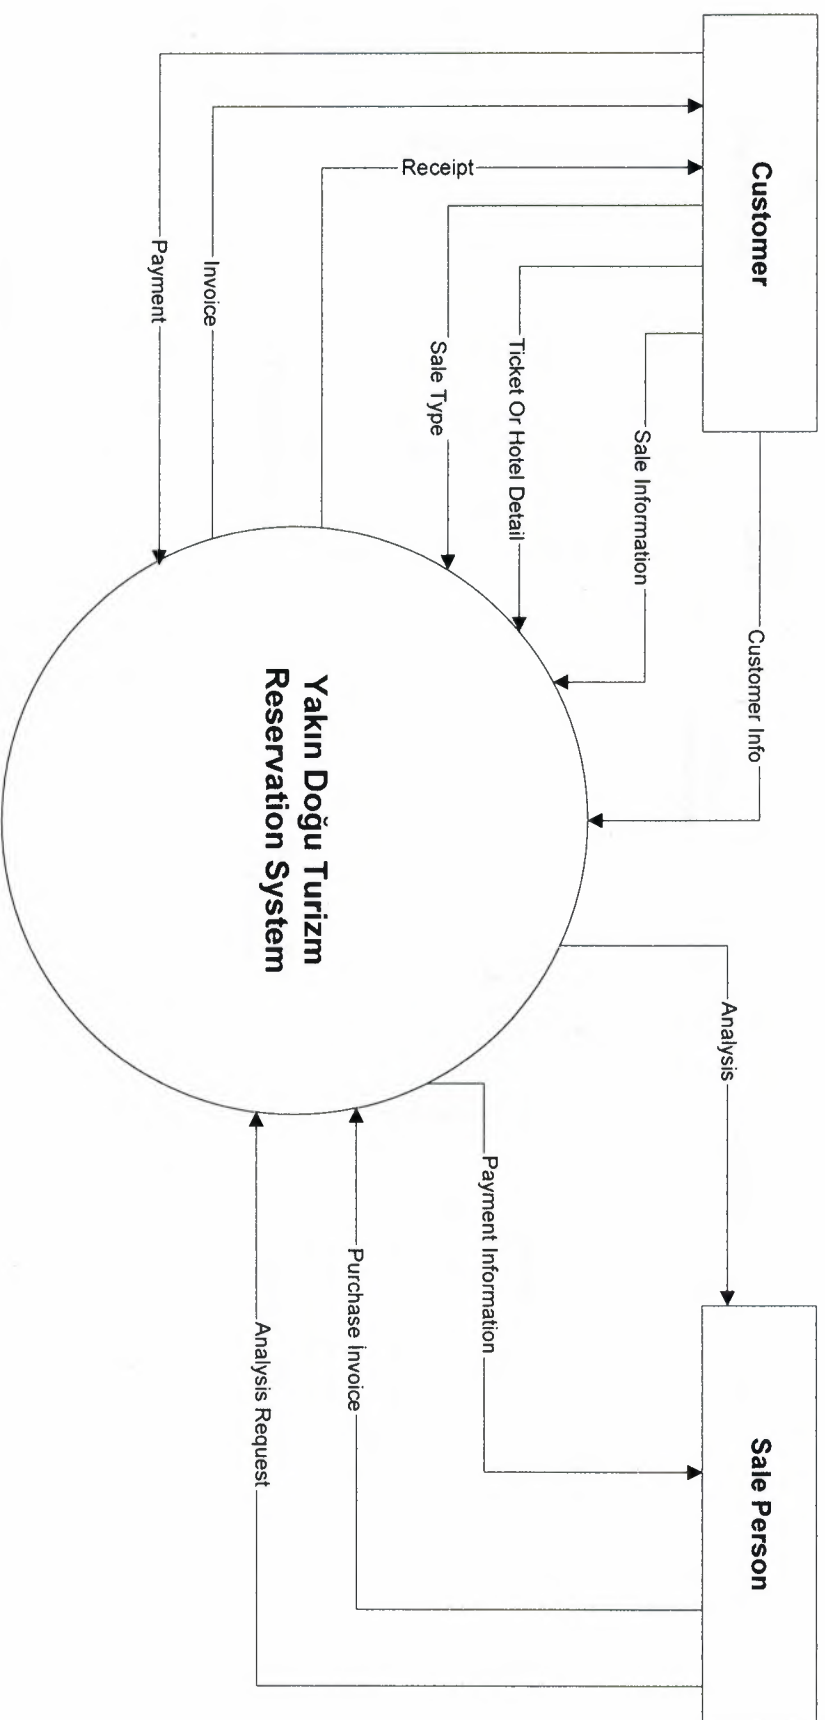

The requirements made by the users are as follows:

- To increase speed of the operations
- To prevent the loss of data
- To prevent easy and quick data access
- To restrict data access with the means of the system security.

### The Existing System Capability

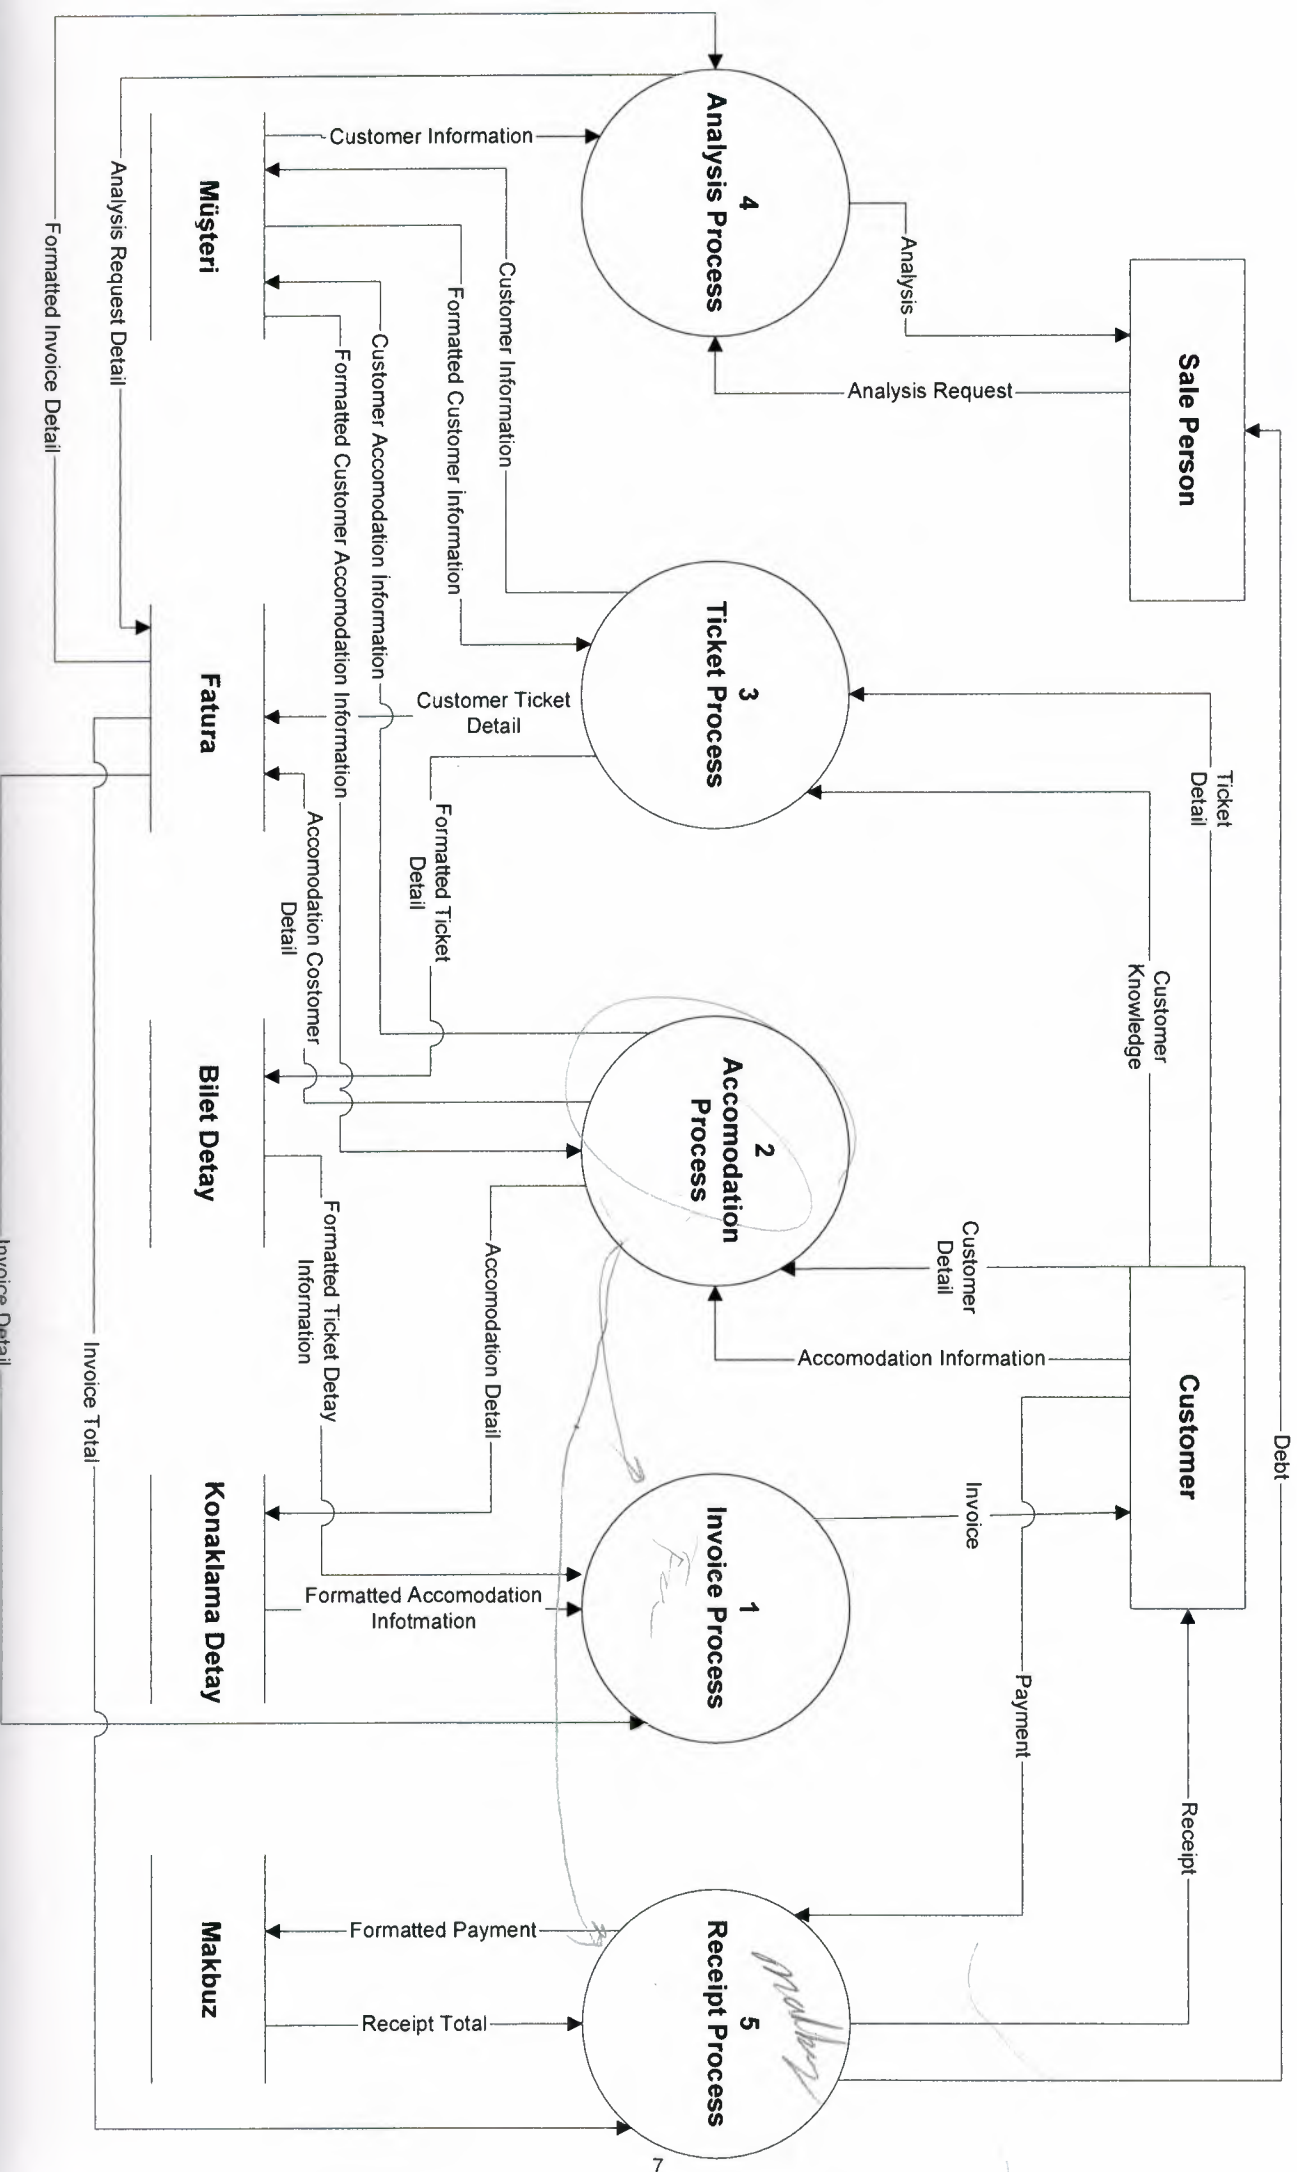

- There is no existing system, everyting is made by Hand.

# Context DFD For Reservation System

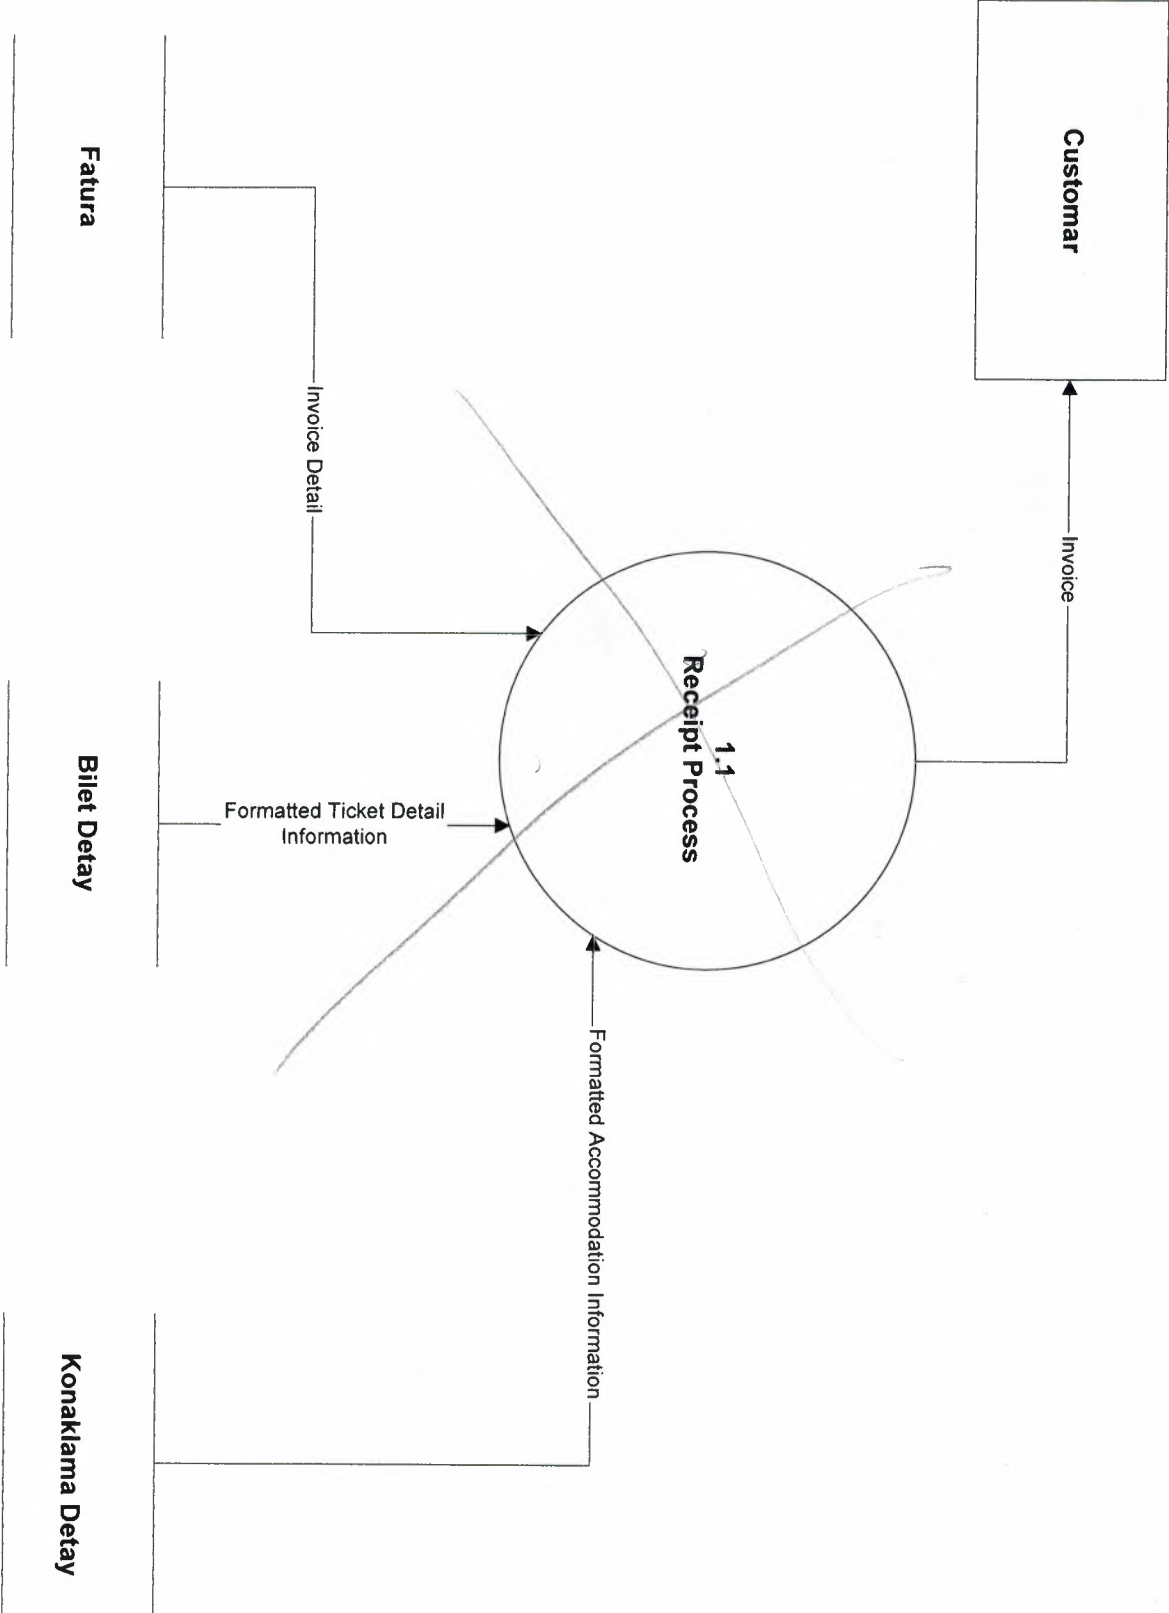

Analysis

## User Manual

User must enter password to enter the system.( see fig 1)

First of all user must select the process. Fatura, Makbuz or Analiz.

If user select Fatura: User must select Satış tipi, Bilet or Konaklama

If selected process is Ticket:

In ticket reservation: User enter Gidiş or dönüş tarihi, Nerden Nereye, Hava yolu detail, Ticket PNR number, passenger name, surname, passenger kiş information, fiyat, and indirim. (see fig 2)

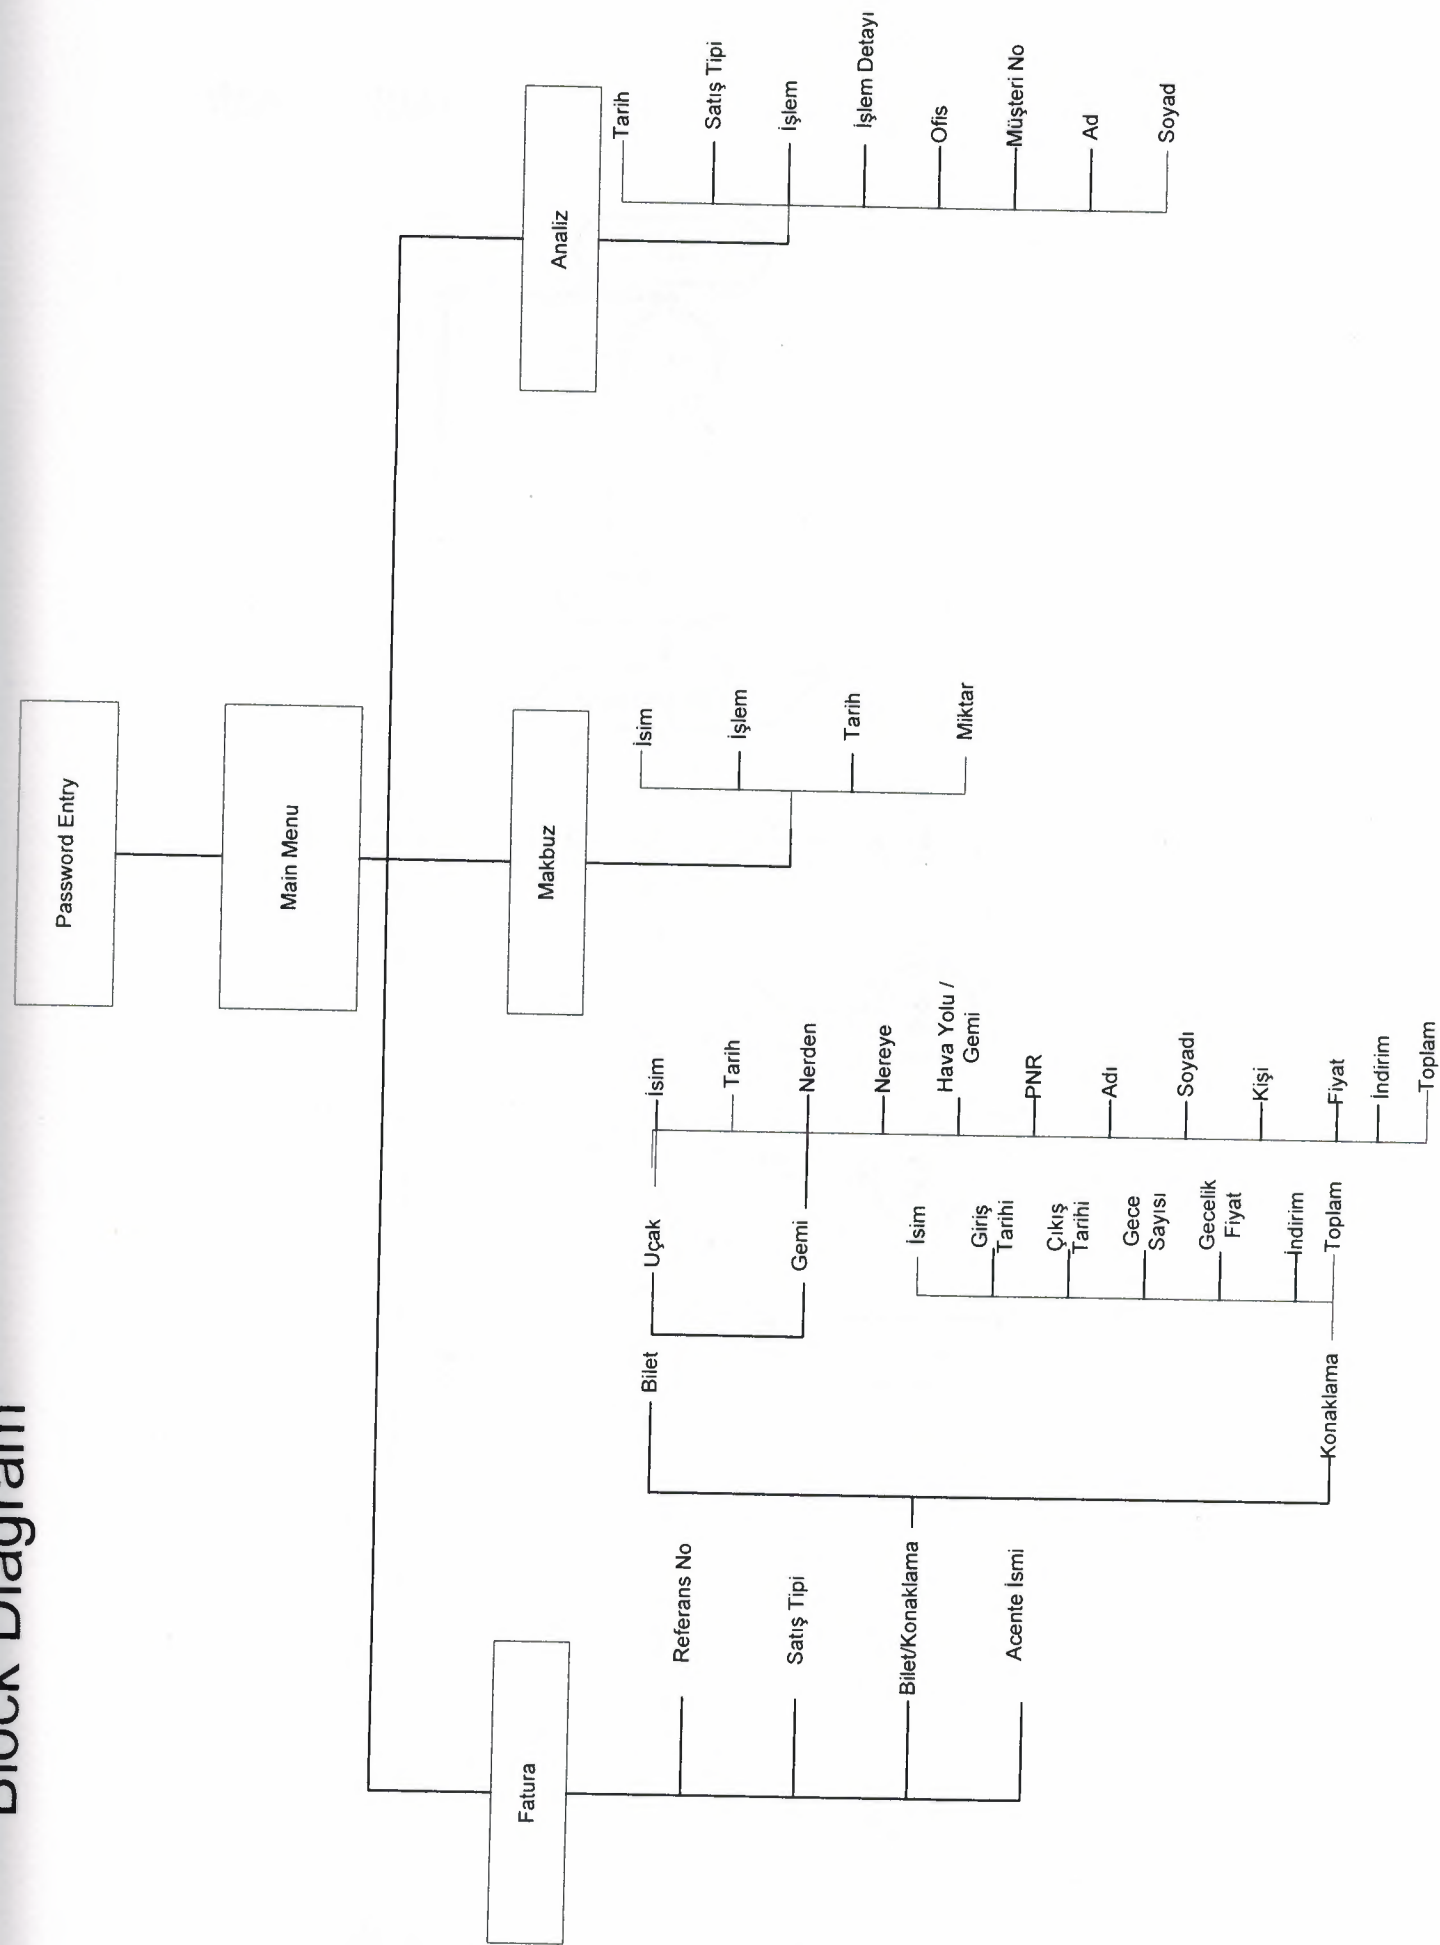

If selected process is Konaklama:

In accomodation reservation: User must enter Acente ismi, Ülke and Otel A

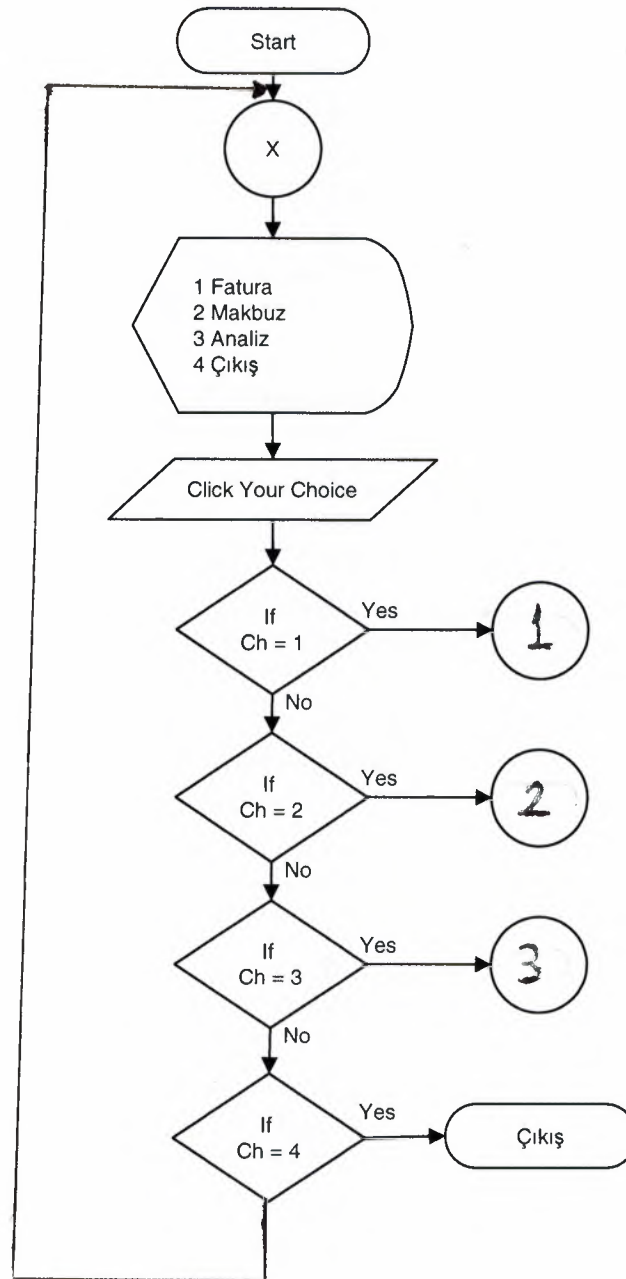

Then user enter customer information, Giriş tarihi, çıkış tarihi, gece sayısı, gecelik fiyat, ek banka komisyonu, indirim, döviz, oda tipi, pansiyon, adı, soyadı, kiş and açıklama. (see fig 3)

If user select Makbuz : Find the customer, insert customer payment detail: işlem, tarih, banka adı, şube adı and miktar. (see fig 4)

If user select Analiz user select the analyse type. Like: Fatura tarihi, Satış T İşlem, İşlem Detayı, Ofis, Müşteri No, Ad or Soyad. User can select all type can select a specific information. (see fig 5)
