# HOTEL MANAGEMENT
# USING FOXPRO PROGRAMMING

GRADUATION PROJECT
COM-400

STUDENT: ABDUL SAMEE MUHAMMAD

SUPERVISOR: MS. BESIME ERIN

NICOSIA-2002

# ABSTRACT

Computer technology is proved that it is very important in our life. As the time is passing, technology is changed. Nowadays every department needs to be computerized. In order to complete our requirements in computers, we need strong database system where we can put our information and data.

Database management system is the branch of software, which is very famous in Computer Software to store all types of data and information.

My project is for hotel management using Computer programming. I used FoxPro Programming Language, which is one of the best and strongest database language.

In this project, I worked hard to make a good program, which will cover all services needed in most hotels.

# AKNOWLEDGEMENT

I have no words to say thanks to my parents, my brother, my aunt and uncle who supported me through all my life until this moment. This moment is the happiest moment of my life and I m glad to give happiness to my parents.

Also I would like to thank my supervisor Miss. Besime Erin who supported me in my studies whenever I required help and advice. She taught me FoxPro in two courses and completed her favor by taking the responsibility of supervising me in my final graduation project.

Here, I would also like to say thanks to my teachers who supported me well through out my studies.

CONCLUSION.....113

# INTRODUCTION

Technology is important in every field. Every department needs computer hardware and software to improve their performance. There are my companies, who improve their performances with the help of computer hardware and software. In my project, I tried to make a well-designed program for hotel management.

The aim of hotel departments is to give a warm welcome to the customers and look after them through their holiday. The hotel consists of many departments like, Reception, Restaurant, Bar, Reservation e.t.c.

Programming in FOXPRO, first of all, four databases named as Check in.DBF, reservation.DBF, rooms.DBF have been created and the attribute values have been entered. Using these databases, there are several menu-based applications of the programs have been developed. These menus include Main Menu, Reception Menu, Searching Menu, information Menu and Transaction Menu. Each of these menus provides different Submenus and options for dealing the Customers affairs. For example, adding a new entry to any of defined databases, searching these databases, updating and deleting the entries from the databases.

The purpose of this project (Use of FoxPro) as well as this course is to implement the Database Management Systems for different fields of life and this can be realized by looking at just one example of this Hotel Management Program.

# CONCLUSION

In this Project, I tried to make a program, which will be able to help Hotel management including all the major departments. The aim is to provide a basic program which can run in the hotel, and helpful for the staff to run it and learn it easily. This program will helpful for the client and easy to use, which always clients wants. Client will be happy for his budget which he will spend on this project.

Finally, I am thanking my supervisor, Miss Besime Erin because She helped me a lot to learn FoxPro and support me through all my studies.

On last, it is really appreciation to my family, my aunt and uncle for their encouragement and support.
